

# Russian Federation

## Human Capital Index 2020

This brief provides an update to the Human Capital Index (HCI). First launched in 2018, the HCI measures the amount of human capital that a child born today can expect to attain by age 18. It conveys the productivity of the next generation of workers compared to a benchmark of complete education and full health. Worldwide a child born in 2020 can expect, on average, to be 56 percent as productive as she could be when she grows up. All data represent the status of countries pre-COVID-19.

### THE HUMAN CAPITAL INDEX

**Human Capital Index.** A child born in the Russian Federation today will be **68 percent** as productive when she grows up as she could be if she enjoyed complete education and full health. This is lower than the average for Europe & Central Asia region but higher than the average for Upper middle income countries. Between 2010 and 2020, the HCI value for the Russian Federation increased from 0.60 to 0.68. Figure 1 shows how the HCI and each of the components evolved over time.

- **Probability of Survival to Age 5.** 99 out of 100 children born in the Russian Federation survive to age 5.
- **Expected Years of School.** In the Russian Federation, a child who starts school at age 4 can expect to complete **13.7 years** of school by her 18th birthday.
- **Harmonized Test Scores.** Students in the Russian Federation score **498** on a scale where 625 represents advanced attainment and 300 represents minimum attainment.
- **Learning-adjusted Years of School.** Factoring in what children actually learn, expected years of school is only **10.9 years**.
- **Adult Survival Rate.** Across the Russian Federation, **80 percent** of 15-year olds will survive until age 60. This statistic is a proxy for the range of health risks that a child born today would experience as an adult under current conditions.
- **Healthy Growth (Not Stunted Rate).** Data on stunting are not available for the Russian Federation.

### DIFFERENCES IN HCI ACROSS GENDER AND SOCIO-ECONOMIC GROUPS

In the Russian Federation, the HCI for girls is higher than for boys. Table 1 shows gender disaggregation for each of the HCI components.

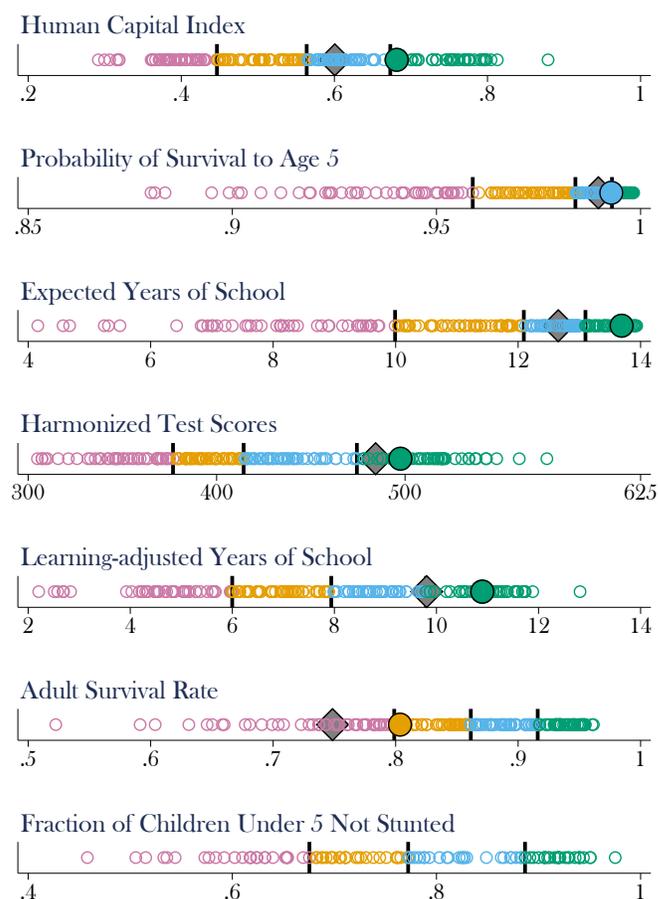

In the Russian Federation, there are not sufficient data to disaggregate HCI by socio-economic groups.

**Table 1. HCI by Gender and Socio-economic Group**

Component	Boys	Girls	Overall
HCI	0.64	0.73	0.68
Survival to Age 5	0.99	0.99	0.99
Expected Years of School	13.7	13.7	13.7
Harmonized Test Scores	494	501	498
Learning-adjusted Years of School	10.8	11.0	10.9
Adult Survival Rate	0.72	0.89	0.80
Not Stunted Rate	-	-	-
HCI Ratio (richest / poorest 20 percent)	-	-	-

 - Large circle represents Russian Federation in 2020  
 - Diamond represents Russian Federation in 2010  
 - Small circles represent other countries  
 - Lines and color of circles indicate quartiles of the distribution

The outlook for the next generation has been improving in most countries in Europe & Central Asia. Efforts are being made to protect human capital gains against setbacks and accelerate progress for all. The challenges unleashed by COVID-19 require an even stronger policy response, including greater use of technology to improve service delivery and enhanced social assistance programs, to ensure that people receive quality education and health care.

### DOMESTIC RESOURCE UTILIZATION AND MOBILIZATION

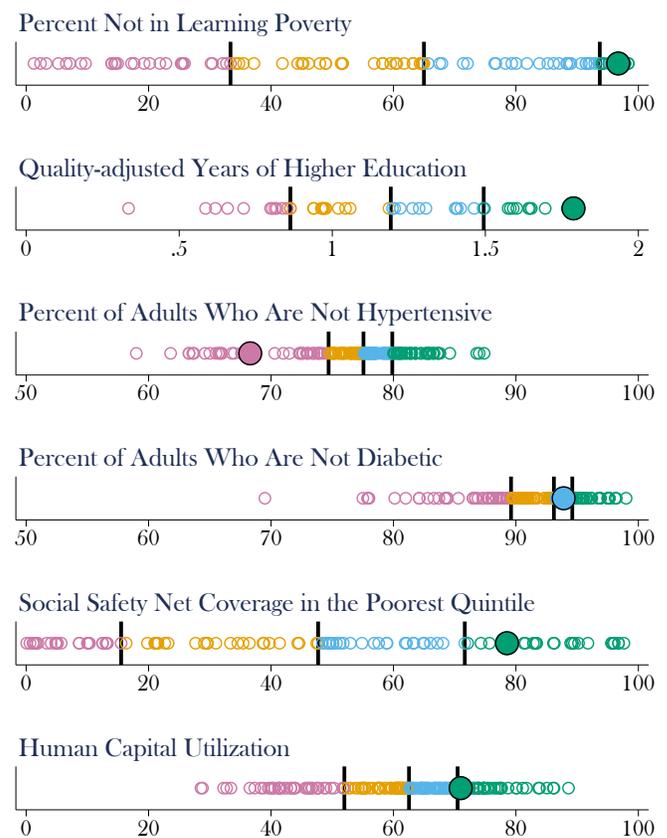

- **Health Spending.** The Russian Federation spends **3.1 percent** (2017) of its GDP in public spending on health. This is lower than both the regional average (4.9%) and the average for its income group (4%). **5 percent** (2014) of the population incurs catastrophic health expenditure measured as out-of-pocket spending exceeding 10% of household consumption or income.
- **Education Spending.** The Russian Federation spends **3.7 percent** (2016) of its GDP in government education spending. This is lower than both the regional average (4.6%) and the average for its income group (4.7%).
- **Social Assistance Spending.** In the Russian Federation, data on social assistance spending are not available. The average for its region is 1.8 percent and for its income group is 1.5 percent.
- **Government Revenue.** General government revenue in the Russian Federation is **35.5 percent** (2018) of GDP. This is lower than the average for its region (38.1%) but higher than the average for its income group (30.6%).

### COMPLEMENTARY INDICATORS

- **Learning Poverty.** In the Russian Federation, **3 percent** (2016) of 10-year-olds cannot read and understand a simple text by the end of primary school. This is lower than both the average for its region (11%) and the average for its income group (38%).
- **Pre-primary Gross Enrollment.** In the Russian Federation, the gross enrollment ratio in pre-primary education is **87 percent** (2017). This is higher than both the average for its region (85%) and the average for its income group (63%).
- **Quality-adjusted Years of Higher Education.** In the Russian Federation, about **61 percent** (2017) of adults ages 30-34 have a tertiary degree. A child born today can expect to complete **2.1 years** of higher education. Factoring in the quality of higher education, expected years of higher education is only **1.8 years**.
- **NCD Deaths.** In the Russian Federation, the probability of dying between ages 30 and 70 from cardiovascular disease, cancer, diabetes, or chronic respiratory diseases is **25 percent** (2016). This is higher than both the average for its region (17%) and the average for its income group (20%).
- **Health Risk Factors.** In the Russian Federation **25 percent** of adults are obese, **30 percent** are smokers, and **39 percent** are heavy drinkers.
- **Hypertension.** In the Russian Federation, **32 percent** (2015) of the population age 18 and older has hypertension. This is higher than both the average for its region (29%) and the average for its income group (23%).
- **Diabetes.** In the Russian Federation, **6 percent** (2019) of the population ages 20-79 has type 1 or type 2 diabetes. This is similar to the average for its region (6%) but lower than the average for its income group (10%).
- **Universal Health Coverage (UHC) Index.** The index, ranging from 0 to 100, measures coverage of essential health services based on tracer interventions. In the Russian Federation, the UHC Index score is **74** (2017). This is lower than the average for its region (75) but higher than the average for its income group (69).

- **Social Safety Net Coverage.** In the Russian Federation, **79 percent** (2017) of the poorest quintile is covered by social safety nets. This is higher than both the average for its region (46%) and the average for its income group (57%).
- **Human Capital Utilization.** In the Russian Federation, **71 percent** (2018) of the working-age population is employed. This is higher than both the average for its region (65%) and the average for its income group (57%).
