

# Republic of Congo

## Human Capital Index 2020

This brief provides an update to the Human Capital Index (HCI). First launched in 2018, the HCI measures the amount of human capital that a child born today can expect to attain by age 18. It conveys the productivity of the next generation of workers compared to a benchmark of complete education and full health. Worldwide a child born in 2020 can expect, on average, to be 56 percent as productive as she could be when she grows up. All data represent the status of countries pre-COVID-19.

### THE HUMAN CAPITAL INDEX

**Human Capital Index.** A child born in the Republic of Congo today will be **42 percent** as productive when she grows up as she could be if she enjoyed complete education and full health. This is slightly higher than the average for Sub-Saharan Africa region but lower than the average for Lower middle income countries. Between 2010 and 2020, the HCI value for the Republic of Congo increased from 0.41 to 0.42. Figure 1 shows how the HCI and each of the components evolved over time.

- **Probability of Survival to Age 5.** 95 out of 100 children born in the Republic of Congo survive to age 5.
- **Expected Years of School.** In the Republic of Congo, a child who starts school at age 4 can expect to complete **8.9 years** of school by her 18th birthday.
- **Harmonized Test Scores.** Students in the Republic of Congo score **371** on a scale where 625 represents advanced attainment and 300 represents minimum attainment.
- **Learning-adjusted Years of School.** Factoring in what children actually learn, expected years of school is only **5.3 years**.
- **Adult Survival Rate.** Across the Republic of Congo, **74 percent** of 15-year olds will survive until age 60. This statistic is a proxy for the range of health risks that a child born today would experience as an adult under current conditions.
- **Healthy Growth (Not Stunted Rate).** 79 out of 100 children are **not** stunted. 21 out of 100 children are stunted, and so are at risk of cognitive and physical limitations that can last a lifetime.

### DIFFERENCES IN HCI ACROSS GENDER AND SOCIO-ECONOMIC GROUPS

In the Republic of Congo, the HCI for girls is higher than for boys. Table 1 shows gender disaggregation for each of the HCI components.

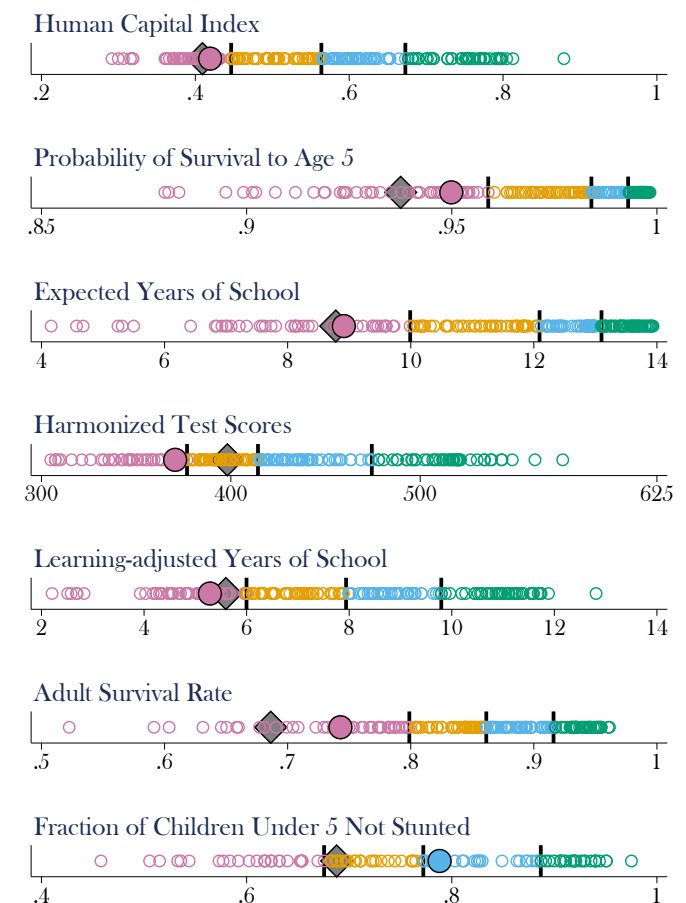

The ratio in HCI between the richest and poorest 20 percent of the population in the Republic of Congo is **1.32** (global average: 1.35; global range: 1.12-1.68).

**Table 1. HCI by Gender and Socio-economic Group**

Component	Boys	Girls	Overall
HCI	0.41	0.43	0.42
Survival to Age 5	0.95	0.95	0.95
Expected Years of School	8.7	9.1	8.9
Harmonized Test Scores	372	369	371
Learning-adjusted Years of School	5.2	5.4	5.3
Adult Survival Rate	0.72	0.76	0.74
Not Stunted Rate	0.78	0.80	0.79
HCI Ratio (richest / poorest 20 percent)			1.32
