

# Ghana

## Human Capital Index 2020

This brief provides an update to the Human Capital Index (HCI). First launched in 2018, the HCI measures the amount of human capital that a child born today can expect to attain by age 18. It conveys the productivity of the next generation of workers compared to a benchmark of complete education and full health. Worldwide a child born in 2020 can expect, on average, to be 56 percent as productive as she could be when she grows up. All data represent the status of countries pre-COVID-19.

### THE HUMAN CAPITAL INDEX

**Human Capital Index.** A child born in Ghana today will be **45 percent** as productive when she grows up as she could be if she enjoyed complete education and full health. This is higher than the average for Sub-Saharan Africa region but lower than the average for Lower middle income countries.

- **Probability of Survival to Age 5.** 95 out of 100 children born in Ghana survive to age 5.
- **Expected Years of School.** In Ghana, a child who starts school at age 4 can expect to complete **12.1 years** of school by her 18th birthday.
- **Harmonized Test Scores.** Students in Ghana score **307** on a scale where 625 represents advanced attainment and 300 represents minimum attainment.
- **Learning-adjusted Years of School.** Factoring in what children actually learn, expected years of school is only **6 years**.
- **Adult Survival Rate.** Across Ghana, **77 percent** of 15-year olds will survive until age 60. This statistic is a proxy for the range of health risks that a child born today would experience as an adult under current conditions.
- **Healthy Growth (Not Stunted Rate).** **82** out of 100 children are **not** stunted. **18** out of 100 children are stunted, and so are at risk of cognitive and physical limitations that can last a lifetime.

### DIFFERENCES IN HCI ACROSS GENDER AND SOCIO-ECONOMIC GROUPS

In Ghana, the HCI for girls is higher than for boys. Table 1 shows gender disaggregation for each of the HCI components.

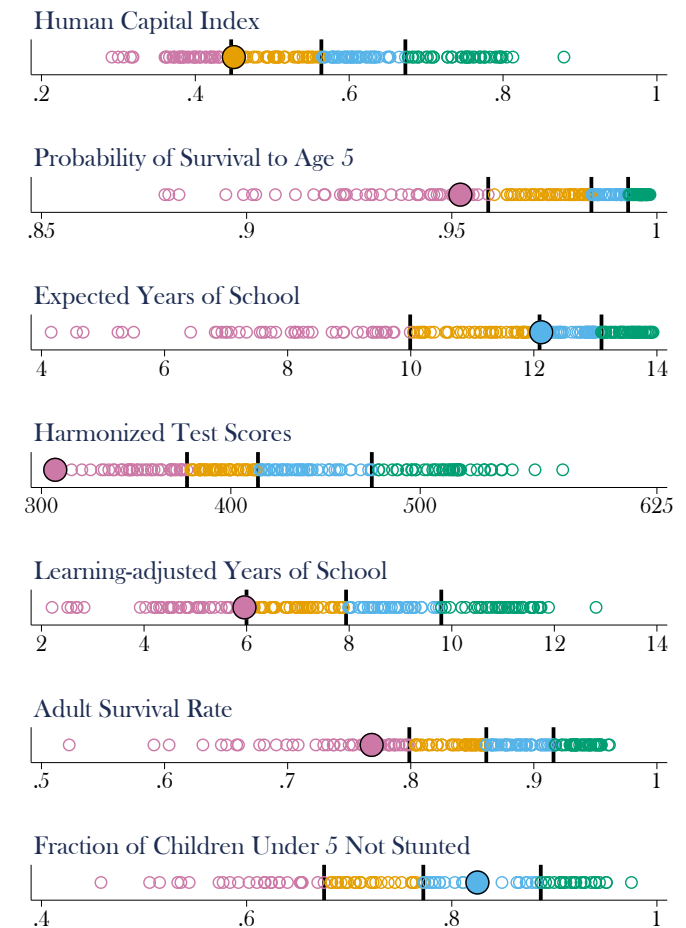

The ratio in HCI between the richest and poorest 20 percent of the population in Ghana is **1.16** (global average: 1.35; global range: 1.12-1.68).

**Table 1. HCI by Gender and Socio-economic Group**

Component	Boys	Girls	Overall
HCI	0.44	0.46	0.45
Survival to Age 5	0.95	0.96	0.95
Expected Years of School	12.0	12.2	12.1
Harmonized Test Scores	308	306	307
Learning-adjusted Years of School	5.9	6.0	6.0
Adult Survival Rate	0.75	0.79	0.77
Not Stunted Rate	0.81	0.84	0.82
HCI Ratio (richest / poorest 20 percent)			1.16
