Human Capital Index 2020

This brief provides an update to the Human Capital Index (HCI). First launched in 2018, the HCI measures the amount of human capital that a child born today can expect to attain by age 18. It conveys the productivity of the next generation of workers compared to a benchmark of complete education and full health. Worldwide a child born in 2020 can expect, on average, to be 56 percent as productive as she could be when she grows up. All data represent the status of countries pre-COVID-19.

THE HUMAN CAPITAL INDEX

Human Capital Index. A child born in Cambodia today will be **49 percent** as productive when she grows up as she could be if she enjoyed complete education and full health. This is lower than the average for East Asia & Pacific region but slightly higher than the average for Lower middle income countries.

- **Probability of Survival to Age 5.** 97 out of 100 children born in Cambodia survive to age 5.
- **Expected Years of School.** In Cambodia, a child who starts school at age 4 can expect to complete **9.5 years** of school by her 18th birthday.
- **Harmonized Test Scores.** Students in Cambodia score **452** on a scale where 625 represents advanced attainment and 300 represents minimum attainment.
- **Learning-adjusted Years of School.** Factoring in what children actually learn, expected years of school is only **6.8 years**.
- **Adult Survival Rate.** Across Cambodia, **84 percent** of 15-year olds will survive until age 60. This statistic is a proxy for the range of health risks that a child born today would experience as an adult under current conditions.
- **Healthy Growth (Not Stunted Rate).** **68** out of 100 children are **not** stunted. **32** out of 100 children are stunted, and so are at risk of cognitive and physical limitations that can last a lifetime.

DIFFERENCES IN HCI ACROSS GENDER AND SOCIO-ECONOMIC GROUPS

In Cambodia, lack of data prevents comparison of HCI by gender. Table 1 shows gender disaggregation for each of the HCI components, where available.

In Cambodia, there are not sufficient data to disaggregate HCI by socio-economic groups.

Table 1. HCI by Gender and Socio-economic Group

Component	Boys	Girls	Overall
HCI	-	-	0.49
Survival to Age 5	0.97	0.98	0.97
Expected Years of School	9.3	9.6	9.5
Harmonized Test Scores	-	-	452
Learning-adjusted Years of School	-	-	6.8
Adult Survival Rate	0.80	0.87	0.84
Not Stunted Rate	0.67	0.68	0.68
HCI Ratio (richest / poorest 20 percent)	-	-	-
