

# Kuwait

## Human Capital Index 2020

This brief provides an update to the Human Capital Index (HCI). First launched in 2018, the HCI measures the amount of human capital that a child born today can expect to attain by age 18. It conveys the productivity of the next generation of workers compared to a benchmark of complete education and full health. Worldwide a child born in 2020 can expect, on average, to be 56 percent as productive as she could be when she grows up. All data represent the status of countries pre-COVID-19.

### THE HUMAN CAPITAL INDEX

**Human Capital Index.** A child born in Kuwait today will be **56 percent** as productive when she grows up as she could be if she enjoyed complete education and full health. This is slightly higher than the average for Middle East & North Africa region but lower than the average for High income countries. Between 2010 and 2020, the HCI value for Kuwait decreased from 0.57 to 0.56. Figure 1 shows how the HCI and each of the components evolved over time.

- **Probability of Survival to Age 5.** 99 out of 100 children born in Kuwait survive to age 5.
- **Expected Years of School.** In Kuwait, a child who starts school at age 4 can expect to complete **12 years** of school by her 18th birthday.
- **Harmonized Test Scores.** Students in Kuwait score **383** on a scale where 625 represents advanced attainment and 300 represents minimum attainment.
- **Learning-adjusted Years of School.** Factoring in what children actually learn, expected years of school is only **7.4 years**.
- **Adult Survival Rate.** Across Kuwait, **94 percent** of 15-year olds will survive until age 60. This statistic is a proxy for the range of health risks that a child born today would experience as an adult under current conditions.
- **Healthy Growth (Not Stunted Rate).** Data on stunting are not available for Kuwait.

### DIFFERENCES IN HCI ACROSS GENDER AND SOCIO-ECONOMIC GROUPS

In Kuwait, the HCI for girls is higher than for boys. Table 1 shows gender disaggregation for each of the HCI components.

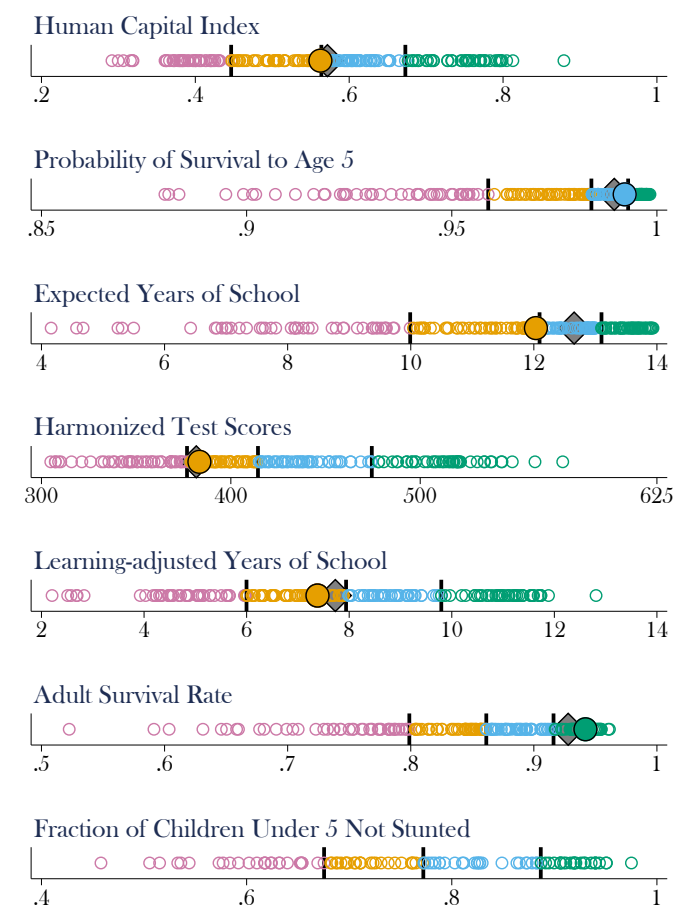

In Kuwait, there are not sufficient data to disaggregate HCI by socio-economic groups.

**Table 1. HCI by Gender and Socio-economic Group**

Component	Boys	Girls	Overall
HCI	0.53	0.60	0.56
Survival to Age 5	0.99	0.99	0.99
Expected Years of School	11.6	12.5	12.0
Harmonized Test Scores	369	398	383
Learning-adjusted Years of School	6.8	8.0	7.4
Adult Survival Rate	0.93	0.96	0.94
Not Stunted Rate	-	-	-
HCI Ratio (richest / poorest 20 percent)			-
