

Montenegro

Human Capital Index 2020

This brief provides an update to the Human Capital Index (HCI). First launched in 2018, the HCI measures the amount of human capital that a child born today can expect to attain by age 18. It conveys the productivity of the next generation of workers compared to a benchmark of complete education and full health. Worldwide a child born in 2020 can expect, on average, to be 56 percent as productive as she could be when she grows up. All data represent the status of countries pre-COVID-19.

THE HUMAN CAPITAL INDEX

Human Capital Index. A child born in Montenegro today will be **63 percent** as productive when she grows up as she could be if she enjoyed complete education and full health. This is lower than the average for Europe & Central Asia region but higher than the average for Upper middle income countries. Between 2010 and 2020, the HCI value for Montenegro increased from 0.59 to 0.63. Figure 1 shows how the HCI and each of the components evolved over time.

- **Probability of Survival to Age 5.** 100 out of 100 children born in Montenegro survive to age 5.
- **Expected Years of School.** In Montenegro, a child who starts school at age 4 can expect to complete **12.8 years** of school by her 18th birthday.
- **Harmonized Test Scores.** Students in Montenegro score **436** on a scale where 625 represents advanced attainment and 300 represents minimum attainment.
- **Learning-adjusted Years of School.** Factoring in what children actually learn, expected years of school is only **8.9 years**.
- **Adult Survival Rate.** Across Montenegro, **91 percent** of 15-year olds will survive until age 60. This statistic is a proxy for the range of health risks that a child born today would experience as an adult under current conditions.
- **Healthy Growth (Not Stunted Rate).** **91** out of 100 children are **not** stunted. **9** out of 100 children are stunted, and so are at risk of cognitive and physical limitations that can last a lifetime.

DIFFERENCES IN HCI ACROSS GENDER AND SOCIO-ECONOMIC GROUPS

In Montenegro, the HCI for girls is higher than for boys. Table 1 shows gender disaggregation for each of the HCI components.

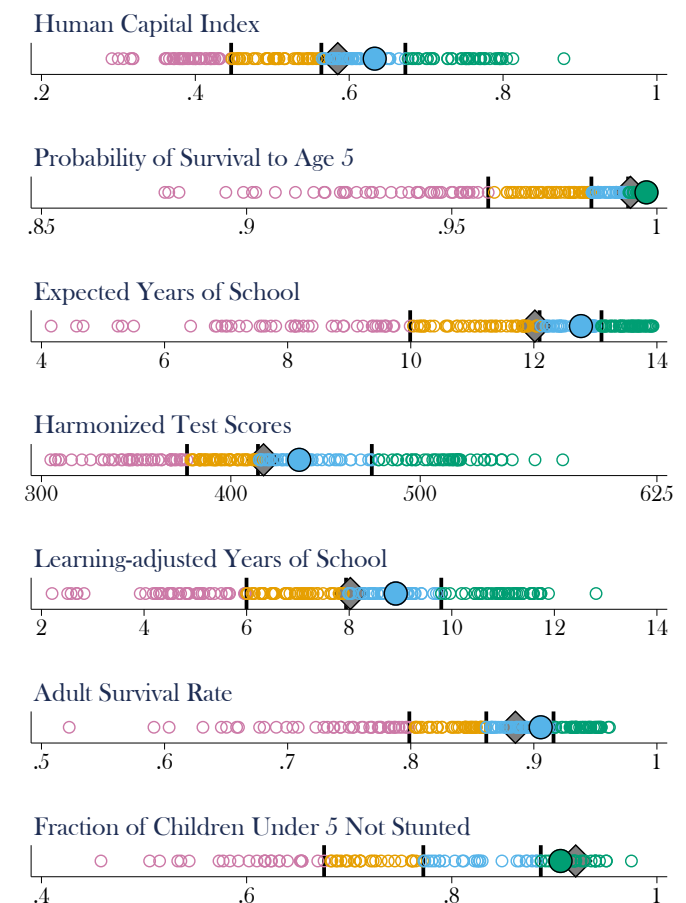

In Montenegro, there are not sufficient data to disaggregate HCI by socio-economic groups.

Table 1. HCI by Gender and Socio-economic Group

Component	Boys	Girls	Overall
HCI	0.63	0.64	0.63
Survival to Age 5	1.00	1.00	1.00
Expected Years of School	12.9	12.6	12.8
Harmonized Test Scores	432	441	436
Learning-adjusted Years of School	8.9	8.9	8.9
Adult Survival Rate	0.88	0.93	0.91
Not Stunted Rate	0.90	0.92	0.91
HCI Ratio (richest / poorest 20 percent)			-
