

# Niger

## Human Capital Index 2020

This brief provides an update to the Human Capital Index (HCI). First launched in 2018, the HCI measures the amount of human capital that a child born today can expect to attain by age 18. It conveys the productivity of the next generation of workers compared to a benchmark of complete education and full health. Worldwide a child born in 2020 can expect, on average, to be 56 percent as productive as she could be when she grows up. All data represent the status of countries pre-COVID-19.

### THE HUMAN CAPITAL INDEX

**Human Capital Index.** A child born in Niger today will be **32 percent** as productive when she grows up as she could be if she enjoyed complete education and full health. This is lower than the average for Sub-Saharan Africa region and Low income countries.

- **Probability of Survival to Age 5.** 92 out of 100 children born in Niger survive to age 5.
- **Expected Years of School.** In Niger, a child who starts school at age 4 can expect to complete **5.5 years** of school by her 18th birthday.
- **Harmonized Test Scores.** Students in Niger score **305** on a scale where 625 represents advanced attainment and 300 represents minimum attainment.
- **Learning-adjusted Years of School.** Factoring in what children actually learn, expected years of school is only **2.7 years**.
- **Adult Survival Rate.** Across Niger, **77 percent** of 15-year olds will survive until age 60. This statistic is a proxy for the range of health risks that a child born today would experience as an adult under current conditions.
- **Healthy Growth (Not Stunted Rate).** 52 out of 100 children are **not** stunted. 48 out of 100 children are stunted, and so are at risk of cognitive and physical limitations that can last a lifetime.

### DIFFERENCES IN HCI ACROSS GENDER AND SOCIO-ECONOMIC GROUPS

In Niger, the HCI for girls is lower than for boys. Table 1 shows gender disaggregation for each of the HCI components.

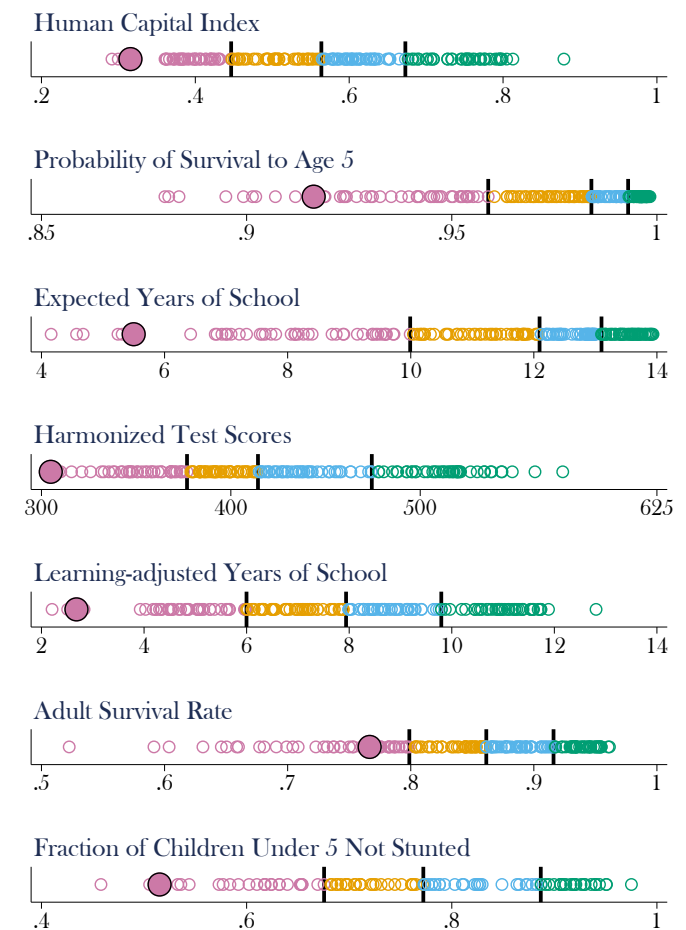

The ratio in HCI between the richest and poorest 20 percent of the population in Niger is **1.34** (global average: 1.35; global range: 1.12-1.68).

**Table 1. HCI by Gender and Socio-economic Group**

Component	Boys	Girls	Overall
HCI	0.32	0.31	0.32
Survival to Age 5	0.91	0.92	0.92
Expected Years of School	5.9	5.0	5.5
Harmonized Test Scores	307	302	305
Learning-adjusted Years of School	2.9	2.4	2.7
Adult Survival Rate	0.75	0.78	0.77
Not Stunted Rate	0.50	0.53	0.52
HCI Ratio (richest / poorest 20 percent)			1.34
