## Human Capital Index 2020

This brief provides an update to the Human Capital Index (HCI). First launched in 2018, the HCI measures the amount of human capital that a child born today can expect to attain by age 18. It conveys the productivity of the next generation of workers compared to a benchmark of complete education and full health. Worldwide a child born in 2020 can expect, on average, to be 56 percent as productive as she could be when she grows up. All data represent the status of countries pre-COVID-19.

### THE HUMAN CAPITAL INDEX

**Human Capital Index.** A child born in Nigeria today will be **36 percent** as productive when she grows up as she could be if she enjoyed complete education and full health. This is lower than the average for Sub-Saharan Africa region and Lower middle income countries.

- **Probability of Survival to Age 5.** **88** out of 100 children born in Nigeria survive to age 5.
- **Expected Years of School.** In Nigeria, a child who starts school at age 4 can expect to complete **10.2 years** of school by her 18th birthday.
- **Harmonized Test Scores.** Students in Nigeria score **309** on a scale where 625 represents advanced attainment and 300 represents minimum attainment.
- **Learning-adjusted Years of School.** Factoring in what children actually learn, expected years of school is only **5 years**.
- **Adult Survival Rate.** Across Nigeria, **66 percent** of 15-year olds will survive until age 60. This statistic is a proxy for the range of health risks that a child born today would experience as an adult under current conditions.
- **Healthy Growth (Not Stunted Rate).** **63** out of 100 children are **not** stunted. **37** out of 100 children are stunted, and so are at risk of cognitive and physical limitations that can last a lifetime.

### DIFFERENCES IN HCI ACROSS GENDER AND SOCIO-ECONOMIC GROUPS

In Nigeria, the HCI for girls is higher than for boys. Table 1 shows gender disaggregation for each of the HCI components.

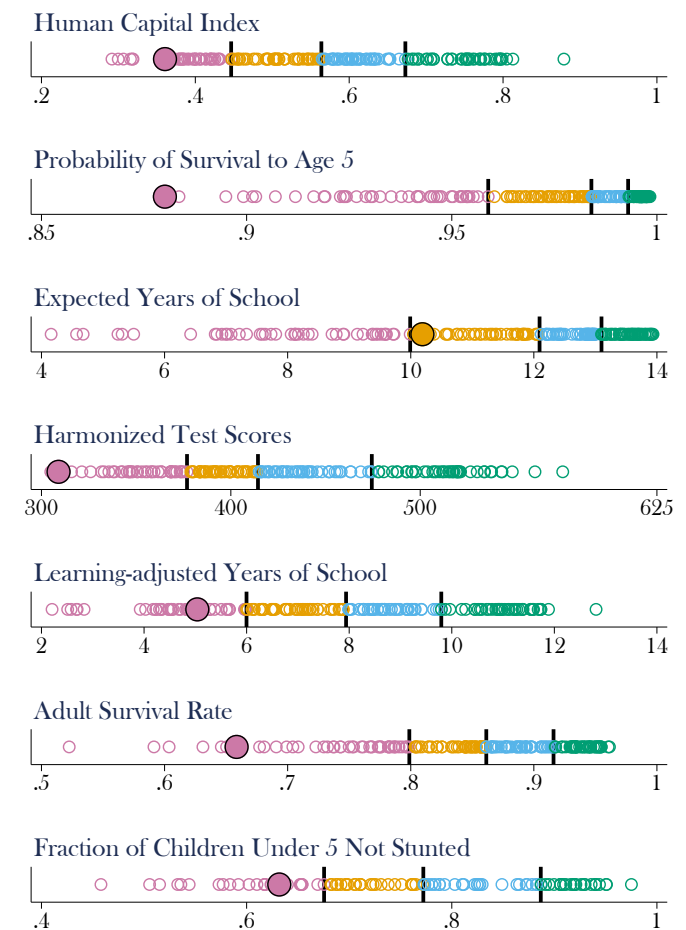

In Nigeria, there are not sufficient data to disaggregate HCI by socio-economic groups.

**Table 1. HCI by Gender and Socio-economic Group**

Component	Boys	Girls	Overall
HCI	0.36	0.37	0.36
Survival to Age 5	0.87	0.89	0.88
Expected Years of School	10.3	10.1	10.2
Harmonized Test Scores	310	308	309
Learning-adjusted Years of School	5.1	5.0	5.0
Adult Survival Rate	0.64	0.68	0.66
Not Stunted Rate	0.61	0.66	0.63
HCI Ratio (richest / poorest 20 percent)			-
