

Saudi Arabia

Human Capital Index 2020

This brief provides an update to the Human Capital Index (HCI). First launched in 2018, the HCI measures the amount of human capital that a child born today can expect to attain by age 18. It conveys the productivity of the next generation of workers compared to a benchmark of complete education and full health. Worldwide a child born in 2020 can expect, on average, to be 56 percent as productive as she could be when she grows up. All data represent the status of countries pre-COVID-19.

THE HUMAN CAPITAL INDEX

Human Capital Index. A child born in Saudi Arabia today will be **58 percent** as productive when she grows up as she could be if she enjoyed complete education and full health. This is higher than the average for Middle East & North Africa region but lower than the average for High income countries. Between 2010 and 2020, the HCI value for Saudi Arabia increased from 0.55 to 0.58. Figure 1 shows how the HCI and each of the components evolved over time.

- **Probability of Survival to Age 5.** 99 out of 100 children born in Saudi Arabia survive to age 5.
- **Expected Years of School.** In Saudi Arabia, a child who starts school at age 4 can expect to complete **12.4 years** of school by her 18th birthday.
- **Harmonized Test Scores.** Students in Saudi Arabia score **399** on a scale where 625 represents advanced attainment and 300 represents minimum attainment.
- **Learning-adjusted Years of School.** Factoring in what children actually learn, expected years of school is only **7.9 years**.
- **Adult Survival Rate.** Across Saudi Arabia, **92 percent** of 15-year olds will survive until age 60. This statistic is a proxy for the range of health risks that a child born today would experience as an adult under current conditions.
- **Healthy Growth (Not Stunted Rate).** Data on stunting are not available for Saudi Arabia.

DIFFERENCES IN HCI ACROSS GENDER AND SOCIO-ECONOMIC GROUPS

In Saudi Arabia, the HCI for girls is higher than for boys. Table 1 shows gender disaggregation for each of the HCI components.

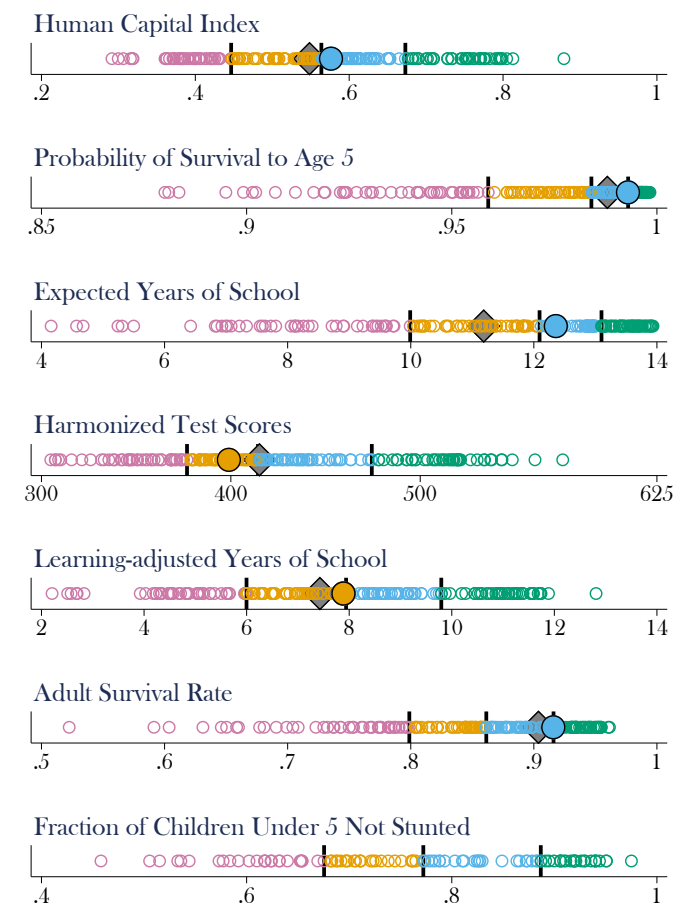

In Saudi Arabia, there are not sufficient data to disaggregate HCI by socio-economic groups.

Table 1. HCI by Gender and Socio-economic Group

Component	Boys	Girls	Overall
HCI	0.56	0.60	0.58
Survival to Age 5	0.99	0.99	0.99
Expected Years of School	12.4	12.3	12.4
Harmonized Test Scores	383	416	399
Learning-adjusted Years of School	7.6	8.2	7.9
Adult Survival Rate	0.91	0.93	0.92
Not Stunted Rate	-	-	-
HCI Ratio (richest / poorest 20 percent)	-	-	-
