

Senegal

Human Capital Index 2020

This brief provides an update to the Human Capital Index (HCI). First launched in 2018, the HCI measures the amount of human capital that a child born today can expect to attain by age 18. It conveys the productivity of the next generation of workers compared to a benchmark of complete education and full health. Worldwide a child born in 2020 can expect, on average, to be 56 percent as productive as she could be when she grows up. All data represent the status of countries pre-COVID-19.

THE HUMAN CAPITAL INDEX

Human Capital Index. A child born in Senegal today will be **42 percent** as productive when she grows up as she could be if she enjoyed complete education and full health. This is higher than the average for Sub-Saharan Africa region but lower than the average for Lower middle income countries. Between 2010 and 2020, the HCI value for Senegal increased from 0.39 to 0.42. Figure 1 shows how the HCI and each of the components evolved over time.

- **Probability of Survival to Age 5.** 96 out of 100 children born in Senegal survive to age 5.
- **Expected Years of School.** In Senegal, a child who starts school at age 4 can expect to complete **7.3 years** of school by her 18th birthday.
- **Harmonized Test Scores.** Students in Senegal score **412** on a scale where 625 represents advanced attainment and 300 represents minimum attainment.
- **Learning-adjusted Years of School.** Factoring in what children actually learn, expected years of school is only **4.8 years**.
- **Adult Survival Rate.** Across Senegal, **83 percent** of 15-year olds will survive until age 60. This statistic is a proxy for the range of health risks that a child born today would experience as an adult under current conditions.
- **Healthy Growth (Not Stunted Rate).** **81** out of 100 children are **not** stunted. **19** out of 100 children are stunted, and so are at risk of cognitive and physical limitations that can last a lifetime.

DIFFERENCES IN HCI ACROSS GENDER AND SOCIO-ECONOMIC GROUPS

In Senegal, the HCI for girls is higher than for boys. Table 1 shows gender disaggregation for each of the HCI components.

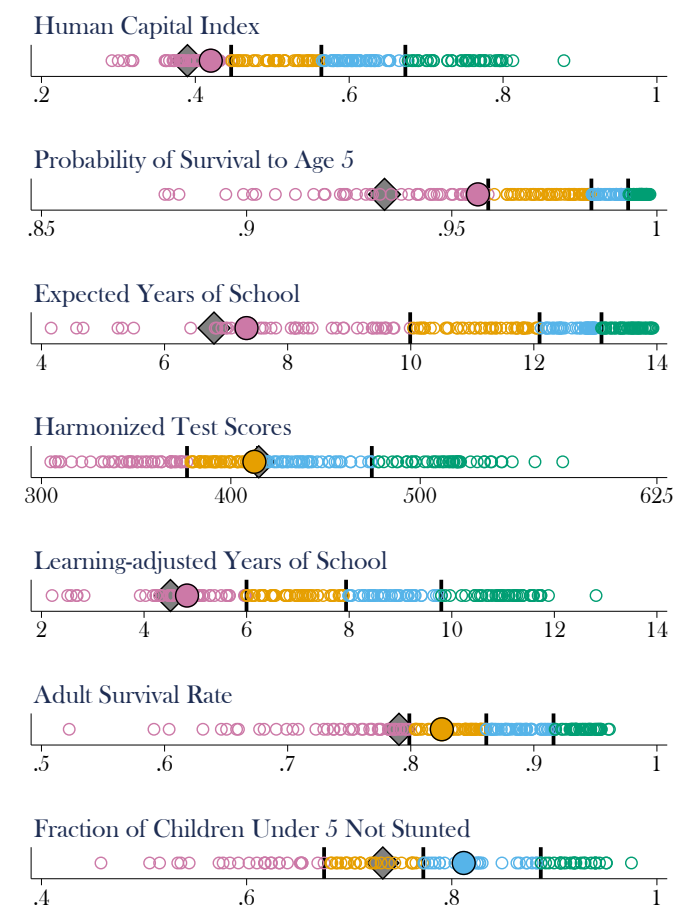

The ratio in HCI between the richest and poorest 20 percent of the population in Senegal is **1.53** (global average: 1.35; global range: 1.12-1.68).

Table 1. HCI by Gender and Socio-economic Group

Component	Boys	Girls	Overall
HCI	0.40	0.44	0.42
Survival to Age 5	0.95	0.96	0.96
Expected Years of School	6.8	7.9	7.3
Harmonized Test Scores	417	408	412
Learning-adjusted Years of School	4.5	5.2	4.8
Adult Survival Rate	0.79	0.86	0.83
Not Stunted Rate	0.79	0.83	0.81
HCI Ratio (richest / poorest 20 percent)			1.53
