

Eswatini

Human Capital Index 2020

This brief provides an update to the Human Capital Index (HCI). First launched in 2018, the HCI measures the amount of human capital that a child born today can expect to attain by age 18. It conveys the productivity of the next generation of workers compared to a benchmark of complete education and full health. Worldwide a child born in 2020 can expect, on average, to be 56 percent as productive as she could be when she grows up. All data represent the status of countries pre-COVID-19.

THE HUMAN CAPITAL INDEX

Human Capital Index. A child born in Eswatini today will be **37 percent** as productive when she grows up as she could be if she enjoyed complete education and full health. This is lower than the average for Sub-Saharan Africa region and Lower middle income countries. Between 2010 and 2020, the HCI value for Eswatini increased from 0.31 to 0.37. Figure 1 shows how the HCI and each of the components evolved over time.

- **Probability of Survival to Age 5.** 95 out of 100 children born in Eswatini survive to age 5.
- **Expected Years of School.** In Eswatini, a child who starts school at age 4 can expect to complete **6.4 years** of school by her 18th birthday.
- **Harmonized Test Scores.** Students in Eswatini score **440** on a scale where 625 represents advanced attainment and 300 represents minimum attainment.
- **Learning-adjusted Years of School.** Factoring in what children actually learn, expected years of school is only **4.5 years**.
- **Adult Survival Rate.** Across Eswatini, **60 percent** of 15-year olds will survive until age 60. This statistic is a proxy for the range of health risks that a child born today would experience as an adult under current conditions.
- **Healthy Growth (Not Stunted Rate).** 74 out of 100 children are **not** stunted. 26 out of 100 children are stunted, and so are at risk of cognitive and physical limitations that can last a lifetime.

DIFFERENCES IN HCI ACROSS GENDER AND SOCIO-ECONOMIC GROUPS

In Eswatini, lack of data prevents comparison of HCI by gender. Table 1 shows gender disaggregation for each of the HCI components, where available.

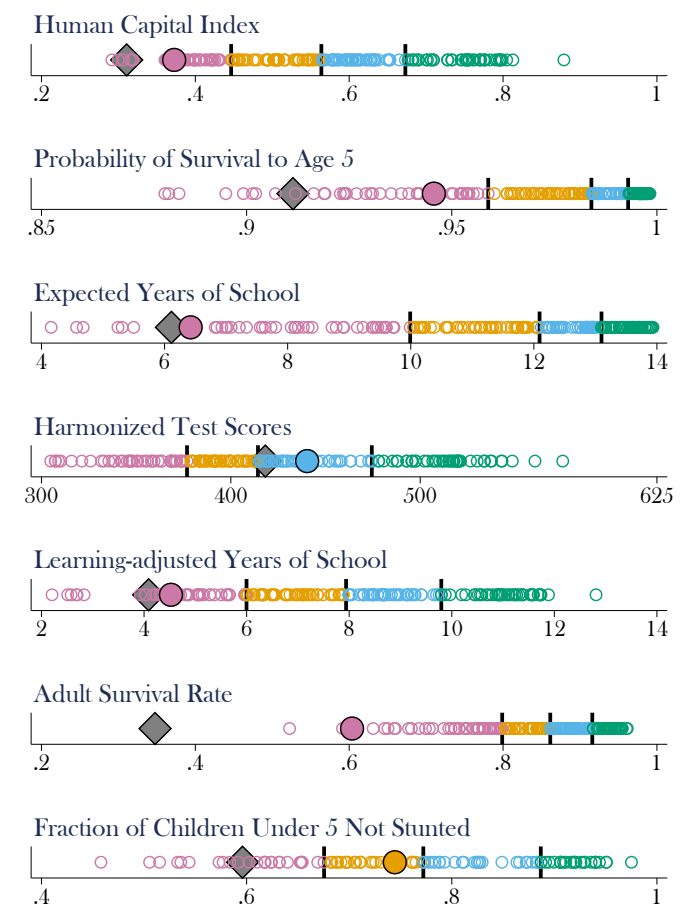

The ratio in HCI between the richest and poorest 20 percent of the population in Eswatini is **1.20** (global average: 1.35; global range: 1.12-1.68).

Table 1. HCI by Gender and Socio-economic Group

Component	Boys	Girls	Overall
HCI	-	-	0.37
Survival to Age 5	0.94	0.95	0.95
Expected Years of School	6.1	6.8	6.4
Harmonized Test Scores	-	-	440
Learning-adjusted Years of School	-	-	4.5
Adult Survival Rate	0.53	0.70	0.60
Not Stunted Rate	0.71	0.78	0.74
HCI Ratio (richest / poorest 20 percent)			1.20
