## Human Capital Index 2020

This brief provides an update to the Human Capital Index (HCI). First launched in 2018, the HCI measures the amount of human capital that a child born today can expect to attain by age 18. It conveys the productivity of the next generation of workers compared to a benchmark of complete education and full health. Worldwide a child born in 2020 can expect, on average, to be 56 percent as productive as she could be when she grows up. All data represent the status of countries pre-COVID-19.

### THE HUMAN CAPITAL INDEX

**Human Capital Index.** A child born in Vanuatu today will be **45 percent** as productive when she grows up as she could be if she enjoyed complete education and full health. This is lower than the average for East Asia & Pacific region and Lower middle income countries.

- **Probability of Survival to Age 5.** 97 out of 100 children born in Vanuatu survive to age 5.
- **Expected Years of School.** In Vanuatu, a child who starts school at age 4 can expect to complete **10.1 years** of school by her 18th birthday.
- **Harmonized Test Scores.** Students in Vanuatu score **348** on a scale where 625 represents advanced attainment and 300 represents minimum attainment.
- **Learning-adjusted Years of School.** Factoring in what children actually learn, expected years of school is only **5.6 years**.
- **Adult Survival Rate.** Across Vanuatu, **87 percent** of 15-year olds will survive until age 60. This statistic is a proxy for the range of health risks that a child born today would experience as an adult under current conditions.
- **Healthy Growth (Not Stunted Rate).** 71 out of 100 children are **not** stunted. 29 out of 100 children are stunted, and so are at risk of cognitive and physical limitations that can last a lifetime.

### DIFFERENCES IN HCI ACROSS GENDER AND SOCIO-ECONOMIC GROUPS

In Vanuatu, the HCI for girls is higher than for boys. Table 1 shows gender disaggregation for each of the HCI components.

In Vanuatu, there are not sufficient data to disaggregate HCI by socio-economic groups.

**Table 1. HCI by Gender and Socio-economic Group**

Component	Boys	Girls	Overall
HCI	0.44	0.47	0.45
Survival to Age 5	0.97	0.98	0.97
Expected Years of School	10.1	10.1	10.1
Harmonized Test Scores	340	356	348
Learning-adjusted Years of School	5.5	5.8	5.6
Adult Survival Rate	0.85	0.90	0.87
Not Stunted Rate	0.67	0.76	0.71
HCI Ratio (richest / poorest 20 percent)			-
