Brunei Darussalam

Human Capital Index 2020

This brief provides an update to the Human Capital Index (HCI). First launched in 2018, the HCI measures the amount of human capital that a child born today can expect to attain by age 18. It conveys the productivity of the next generation of workers compared to a benchmark of complete education and full health. Worldwide a child born in 2020 can expect, on average, to be 56 percent as productive as she could be when she grows up. All data represent the status of countries pre-COVID-19.

THE HUMAN CAPITAL INDEX

Human Capital Index. A child born in Brunei Darussalam today will be 63 percent as productive when she grows up as she could be if she enjoyed complete education and full health. This is higher than the average for East Asia & Pacific region but lower than the average for High income countries.

• Probability of Survival to Age 5. 99 out of 100 children born in Brunei Darussalam survive to age 5.

• Expected Years of School. In Brunei Darussalam, a child who starts school at age 4 can expect to complete 13.2 years of school by her 18th birthday.

• Harmonized Test Scores. Students in Brunei Darussalam score 438 on a scale where 625 represents advanced attainment and 300 represents minimum attainment.

• Learning-adjusted Years of School. Factoring in what children actually learn, expected years of school is only 9.2 years.

• Adult Survival Rate. Across Brunei Darussalam, 88 percent of 15-year olds will survive until age 60. This statistic is a proxy for the range of health risks that a child born today would experience as an adult under current conditions.

• Healthy Growth (Not Stunted Rate). 80 out of 100 children are not stunted. 20 out of 100 children are stunted, and so are at risk of cognitive and physical limitations that can last a lifetime.

DIFFERENCES IN HCI ACROSS GENDER AND SOCIO-ECONOMIC GROUPS

In Brunei Darussalam, the HCI for girls is higher than for boys. Table 1 shows gender disaggregation for each of the HCI components.

In Brunei Darussalam, there are not sufficient data to disaggregate HCI by socio-economic groups.

Countries in the East Asia and Pacific (EAP) region have made remarkable progress on almost every dimension of human capital in the last decade (2010-2020). COVID-19, however, threatens to wipe out much of the progress. Action is needed to boost learning achievement; reinvigorate the health, nutrition, and education systems; and deploy social safety nets to protect the most vulnerable, thus enabling an inclusive and sustainable recovery and accelerating human capital accumulation.

**Domestic Resource Utilization and Mobilization**

- **Health Spending.** Brunei Darussalam spends 2.3 percent (2017) of its GDP in public spending on health. This is lower than both the regional average (4.9%) and the average for its income group (5.3%).

- **Education Spending.** Brunei Darussalam spends 4.4 percent (2016) of its GDP in government education spending. This is lower than both the regional average (4.7%) and the average for its income group (4.5%).

- **Social Assistance Spending.** In Brunei Darussalam, data on social assistance spending are not available. The average for its region is 1.1 percent and for its income group is 1.7 percent.

- **Government Revenue.** General government revenue in Brunei Darussalam is 28.6 percent (2018) of GDP. This is lower than both the regional average (40.7%) and the average for its income group (37.3%).

**Complementary Indicators**

- **Learning Poverty.** In Brunei Darussalam, data on learning poverty are not available. In its region, 15 percent of 10-year-olds cannot read and understand a simple text by the end of primary school. The corresponding value for its income group is 14 percent.

- **Net Secondary Enrollment.** In Brunei Darussalam, 83 percent (2018) of secondary-school age children are enrolled in secondary school. This is higher than the average for its region (72%) but lower than the average for its income group (89%).

- **NCD Deaths.** In Brunei Darussalam, the probability of dying between ages 30 and 70 from cardiovascular disease, cancer, diabetes, or chronic respiratory diseases is 17 percent (2016). This is lower than the average for its region (21%) but higher than the average for its income group (14%).

- **Diabetes.** In Brunei Darussalam, 13 percent (2019) of the population ages 20-79 has type 1 or type 2 diabetes. This is higher than both the average for its region (12%) and for its income group (9%).

- **Smoking.** In Brunei Darussalam, 17 percent (2016) of the population age 15 and older are current smokers (31 percent among men). This is lower than both the average for its region (25%) and the average for its income group (22%).

- **Universal Health Coverage (UHC) Index.** The index, ranging from 0 to 100, measures coverage of essential health services based on tracer interventions. In Brunei Darussalam, the UHC Index score is 81 (2017). This is higher than both the average for its region (65) and the average for its income group (79).

- **Social Safety Net Coverage in the Poorest Quintile.** The index, ranging from 0 to 100, measures coverage of social assistance services based on social safety net interventions. In Brunei Darussalam, the social safety net coverage index is 86 (2018). This is higher than both the average for its region (72) and the average for its income group (97).

- **Human Capital Utilization.** In Brunei Darussalam, 61 percent (2018) of the working-age population is employed. This is lower than both the average for its region (65%) and the average for its income group (70%).

- **Female Labor Force Participation.** In Brunei Darussalam, the female labor force participation rate is 58 percent (2019). This is higher than both the average for its region (57%) and the average for its income group (53%).

- **Drinking Water.** In Brunei Darussalam, 100 percent (2017) of the population has at least a basic source of drinking water. This is higher than both the average for its region (92%) and the average for its income group (99%).
