This brief provides an update to the Human Capital Index (HCI). First launched in 2018, the HCI measures the amount of human capital that a child born today can expect to attain by age 18. It conveys the productivity of the next generation of workers compared to a benchmark of complete education and full health. Worldwide a child born in 2020 can expect, on average, to be 56 percent as productive as she could be when she grows up. All data represent the status of countries pre-COVID-19.

THE HUMAN CAPITAL INDEX

Human Capital Index. A child born in Switzerland today will be 76 percent as productive when she grows up as she could be if she enjoyed complete education and full health. This is higher than the average for Europe & Central Asia region and High income countries. Between 2010 and 2020, the HCI value for Switzerland decreased from 0.77 to 0.76. Figure 1 shows how the HCI and each of the components evolved over time.

- **Probability of Survival to Age 5.** 100 out of 100 children born in Switzerland survive to age 5.
- **Expected Years of School.** In Switzerland, a child who starts school at age 4 can expect to complete 13.3 years of school by her 18th birthday.
- **Harmonized Test Scores.** Students in Switzerland score 515 on a scale where 625 represents advanced attainment and 300 represents minimum attainment.
- **Learning-adjusted Years of School.** Factoring in what children actually learn, expected years of school is only 10.9 years.
- **Adult Survival Rate.** Across Switzerland, 95 percent of 15-year olds will survive until age 60. This statistic is a proxy for the range of health risks that a child born today would experience as an adult under current conditions.
- **Healthy Growth (Not Stunted Rate).** Data on stunting are not available for Switzerland.

DIFFERENCES IN HCI ACROSS GENDER AND SOCIO-ECONOMIC GROUPS

In Switzerland, the HCI for girls is higher than for boys. Table 1 shows gender disaggregation for each of the HCI components.

In Switzerland, there are not sufficient data to disaggregate HCI by socio-economic groups.

The outlook for the next generation has been improving in most countries in Europe & Central Asia. Efforts are being made to protect human capital gains against setbacks and accelerate progress for all. The challenges unleashed by COVID-19 require an even stronger policy response, including greater use of technology to improve service delivery and enhanced social assistance programs, to ensure that people receive quality education and health care.

DOMESTIC RESOURCE UTILIZATION AND MOBILIZATION

- **Health Spending.** Switzerland spends 3.8 percent (2017) of its GDP in public spending on health. This is lower than both the regional average (4.9%) and the average for its income group (5.3%).

- **Education Spending.** Switzerland spends 5.1 percent (2016) of its GDP in government education spending. This is higher than both the regional average (4.6%) and the average for its income group (4.5%).

- **Social Assistance Spending.** In Switzerland, data on social assistance spending are not available. The average for its region is 1.8 percent and for its income group is 1.7 percent.

- **Government Revenue.** General government revenue in Switzerland is 34.1 percent (2017) of GDP. This is lower than both the regional average (38.1%) and the average for its income group (37.3%).

COMPLEMENTSARY INDICATORS

- **Learning Poverty.** In Switzerland, data on learning poverty are not available. In its region, 11 percent of 10-year-olds cannot read and understand a simple text by the end of primary school. The corresponding value for its income group is 14 percent.

- **Pre-primary Gross Enrollment.** In Switzerland, the gross enrollment ratio in pre-primary education is 104 percent (2017). This is higher than both the average for its region (85%) and the average for its income group (91%).

- **Quality-adjusted Years of Higher Education.** In Switzerland, about 51 percent (2018) of adults ages 30-34 have a tertiary degree. A child born today can expect to complete 1.8 years of higher education. Factoring in the quality of higher education, expected years of higher education is only 1.6 years.

- **NCD Deaths.** In Switzerland, the probability of dying between ages 30 and 70 from cardiovascular disease, cancer, diabetes, or chronic respiratory diseases is 9 percent (2016). This is lower than both the average for its region (17%) and the average for its income group (14%).

- **Health Risk Factors.** In Switzerland, 11 percent of adults are obese, 27 percent are smokers, and 16 percent are heavy drinkers.

- **Hypertension.** In Switzerland, 24 percent (2015) of the population age 18 and older has hypertension. This is lower than both the average for its region (29%) and the average for its income group (25%).

- **Diabetes.** In Switzerland, 6 percent (2019) of the population ages 20-79 has type 1 or type 2 diabetes. This is similar to the average for its region (6%) but lower than the average for its income group (9%).

- **Universal Health Coverage (UHC) Index.** The index, ranging from 0 to 100, measures coverage of essential health services based on tracer interventions. In Switzerland, the UHC Index score is 83 (2017). This is higher than both the average for its region (75) and the average for its income group (79).

- **Social Safety Net Coverage.** In Switzerland, data on social safety net coverage of the poorest quintile are not available. The average for its region is 46 percent and for its income group is 70 percent.

- **Human Capital Utilization.** In Switzerland, 80 percent (2018) of the working-age population is employed. This is higher than both the average for its region (65%) and the average for its income group (70%).
