Republic of Congo

Human Capital Index 2020

This brief provides an update to the Human Capital Index (HCI). First launched in 2018, the HCI measures the amount of human capital that a child born today can expect to attain by age 18. It conveys the productivity of the next generation of workers compared to a benchmark of complete education and full health. Worldwide a child born in 2020 can expect, on average, to be 56 percent as productive as she could be when she grows up. All data represent the status of countries pre-COVID-19.

THE HUMAN CAPITAL INDEX

Human Capital Index. A child born in the Republic of Congo today will be 42 percent as productive when she grows up as she could be if she enjoyed complete education and full health. This is slightly higher than the average for Sub-Saharan Africa region but lower than the average for Lower middle income countries. Between 2010 and 2020, the HCI value for the Republic of Congo increased from 0.41 to 0.42. Figure 1 shows how the HCI and each of the components evolved over time.

- **Probability of Survival to Age 5.** 95 out of 100 children born in the Republic of Congo survive to age 5.

- **Expected Years of School.** In the Republic of Congo, a child who starts school at age 4 can expect to complete 8.9 years of school by her 18th birthday.

- **Harmonized Test Scores.** Students in the Republic of Congo score 371 on a scale where 625 represents advanced attainment and 300 represents minimum attainment.

- **Learning-adjusted Years of School.** Factoring in what children actually learn, expected years of school is only 5.3 years.

- **Adult Survival Rate.** Across the Republic of Congo, 74 percent of 15-year olds will survive until age 60. This statistic is a proxy for the range of health risks that a child born today would experience as an adult under current conditions.

- **Healthy Growth (Not Stunted Rate).** 79 out of 100 children are not stunted. 21 out of 100 children are stunted, and so are at risk of cognitive and physical limitations that can last a lifetime.

DIFFERENCES IN HCI ACROSS GENDER AND SOCIO-ECONOMIC GROUPS

In the Republic of Congo, the HCI for girls is higher than for boys. Table 1 shows gender disaggregation for each of the HCI components.

The ratio in HCI between the richest and poorest 20 percent of the population in the Republic of Congo is 1.32 (global average: 1.35; global range: 1.12-1.68).

HCI Ratio (richest / poorest 20 percent) 1.32

The outlook for the next generation has been improving in most African countries. Efforts are being made to protect these human capital gains against setbacks such as COVID-19 and accelerate progress. The WBG Africa Human Capital Plan identifies game-changers for human capital, including women's empowerment to accelerate the demographic transition, a focus on fragile settings, increased use of technologies, and smarter investments at scale.

**Domestic Resource Utilization and Mobilization**

- **Health Spending.** The Republic of Congo spends 1.3 percent (2017) of its GDP in public spending on health. This is lower than both the regional average (2.4%) and the average for its income group (2.8%). 5 percent (2011) of the population incurs catastrophic health expenditure measured as out-of-pocket spending exceeding 10% of household consumption or income.

- **Education Spending.** The Republic of Congo spends 3.6 percent (2018) of its GDP in government education spending. This is lower than both the regional average (4.0%) and the average for its income group (4.5%).

- **Social Assistance Spending.** The Republic of Congo spends 0.5 percent (2019) of its GDP on social assistance. This is lower than both the regional average (1.5%) and the average for its income group (1.4%).

- **Government Revenue.** General government revenue in the Republic of Congo is 29.2 percent (2018) of GDP. This is higher than both the regional average (20.6%) and the average for its income group (27.3%).

**Complementary Indicators**

- **Learning Poverty.** In the Republic of Congo, 85 percent (2014) of 10-year-olds cannot read and understand a simple text by the end of primary school. This is higher than both the average for its region (80%) and the average for its income group (59%).

- **Gross Secondary Enrollment.** In the Republic of Congo, the gross enrollment ratio in secondary education is 53 percent (2012). This is higher than the average for its region (50%) but lower than the average for its income group (70%).

- **Adolescent Girls Out Of School.** In the Republic of Congo, data on percentage of adolescent girls out of school are not available. In its region 33 percent of adolescent girls is out of school. The corresponding value for its income group is 17 percent.

- **Adolescent Fertility Rate.** In the Republic of Congo, there are 111 births (2018) per 1,000 women ages 15-19. This is higher than the Africa Human Capital Target for 2023 (83).

- **Contraceptive Prevalence.** In the Republic of Congo, 19 percent (2015) of women ages 15-49 use modern contraceptive methods. This is lower than both the average for its region (28%) and the average for its income group (42%).

- **Maternal Mortality Ratio.** In the Republic of Congo, for every 100,000 live births 378 women (2017) die from pregnancy-related causes. This is lower than the average for its region (445) but higher than the average for its income group (278).

- **Universal Health Coverage (UHC) Index.** The index, ranging from 0 to 100, measures coverage of essential health services based on tracer interventions. In the Republic of Congo, the UHC Index score is 39 (2017). This is lower than both the average for its region (46) and the average for its income group (56).

- **Social Safety Net Coverage.** In the Republic of Congo, 10 percent (2019) of the poorest quintile is covered by social safety nets. This is lower than the Africa Human Capital Target for 2023 (30%).

- **Electricity.** In the Republic of Congo, 69 percent (2018) of the population has access to electricity. This is higher than the average for its region (58%) but lower than the average for its income group (80%).

- **Internet Connectivity.** In the Republic of Congo, 9 percent (2017) of the population uses the internet. This is lower than both the average for its region (22%) and the average for its income group (34%).

- **Open Defecation.** In the Republic of Congo, 9 percent (2017) of the population practices open defecation. This is lower than the Africa Human Capital Target for 2023 (15%).

**Figure 2. Complementary Indicators**

- **Percent Not in Learning Poverty**
- **Gross Secondary Enrollment**
- **Percent of Adolescent Girls in School**
- **Adolescent Fertility Rate**
- **Contraceptive Prevalence (Modern Methods)**
- **Social Safety Net Coverage in the Poorest Quintile**

**Note:**
- Large circle represents Congo, Rep.
- Small circles represent other countries
- Lines and color of circles indicate quartiles of the distribution

This brief is based on the most recent data available from the Human Capital Project, World Development Indicators, Atlas of Social Protection Indicators of Resilience and Equity (ASPIRE), UNESCO Institute for Statistics, WHO Global Health Observatory and Global Health Expenditure Database, IMF World Economic Outlook, selected national sources and World Bank staff estimates.
