Guatemala

Human Capital Index 2020

This brief provides an update to the Human Capital Index (HCI). First launched in 2018, the HCI measures the amount of human capital that a child born today can expect to attain by age 18. It conveys the productivity of the next generation of workers compared to a benchmark of complete education and full health. Worldwide a child born in 2020 can expect, on average, to be 56 percent as productive as she could be when she grows up. All data represent the status of countries pre-COVID-19.

THE HUMAN CAPITAL INDEX

Human Capital Index. A child born in Guatemala today will be 46 percent as productive when she grows up as she could be if she enjoyed complete education and full health. This is lower than the average for Latin America & Caribbean region and Upper middle income countries. Between 2010 and 2020, the HCI value for Guatemala increased from 0.44 to 0.46. Figure 1 shows how the HCI and each of the components evolved over time.

• Probability of Survival to Age 5. 97 out of 100 children born in Guatemala survive to age 5.
• Expected Years of School. In Guatemala, a child who starts school at age 4 can expect to complete 9.7 years of school by her 18th birthday.
• Harmonized Test Scores. Students in Guatemala score 405 on a scale where 625 represents advanced attainment and 300 represents minimum attainment.
• Learning-adjusted Years of School. Factoring in what children actually learn, expected years of school is only 6.3 years.
• Adult Survival Rate. Across Guatemala, 85 percent of 15-year olds will survive until age 60. This statistic is a proxy for the range of health risks that a child born today would experience as an adult under current conditions.
• Healthy Growth (Not Stunted Rate). 53 out of 100 children are not stunted. 47 out of 100 children are stunted, and so are at risk of cognitive and physical limitations that can last a lifetime.

DIFFERENCES IN HCI ACROSS GENDER AND SOCIO-ECONOMIC GROUPS

In Guatemala, the HCI for girls is higher than for boys. Table 1 shows gender disaggregation for each of the HCI components.

The ratio in HCI between the richest and poorest 20 percent of the population in Guatemala is 1.55 (global average: 1.35; global range: 1.12-1.68).

Countries in Latin America and the Caribbean have improved their human capital outcomes, but large socioeconomic, gender and geographic inequalities still hinder inclusive development. To ensure continued progress and overcome the challenges unleashed by COVID-19, countries need to build strong and resilient public health systems, move toward universal social protection, boost learning achievement especially in early childhood, and improve employability, productivity and working conditions.

DOMESTIC RESOURCE UTILIZATION AND MOBILIZATION

- **Health Spending.** Guatemala spends 2.1 percent (2017) of its GDP in public spending on health. This is lower than both the regional average (3.8%) and the average for its income group (4%). 1 percent (2014) of the population incurs catastrophic health expenditure measured as out-of-pocket spending exceeding 10% of household consumption or income.

- **Education Spending.** Guatemala spends 2.9 percent (2018) of its GDP in government education spending. This is lower than both the regional average (4.8%) and the average for its income group (4.7%).

- **Social Assistance Spending.** Guatemala spends 0.3 percent (2013) of its GDP on social assistance. This is lower than both the regional average (1.4%) and the average for its income group (1.5%).

- **Government Revenue.** General government revenue in Guatemala is 10.6 percent (2018) of GDP. This is lower than both the regional average (24.7%) and the average for its income group (30.6%).

**COMPLEMENTARY INDICATORS**

- **Learning Poverty.** In Guatemala, 67 percent (2013) of 10-year-olds cannot read and understand a simple text by the end of primary school. This is higher than both the average for its region (55%) and the average for its income group (38%).

- **Pre-primary Gross Enrollment.** In Guatemala, the gross enrollment ratio in pre-primary education is 51 percent (2018). This is lower than both the average for its region (76%) and the average for its income group (63%).

- **NCD Deaths.** In Guatemala, the probability of dying between ages 30 and 70 from cardiovascular disease, cancer, diabetes, or chronic respiratory diseases is 15 percent (2016). This is lower than both the average for its region (18%) and the average for its income group (20%).

- **Obesity.** In Guatemala, 21 percent (2016) of adults age 18 and older are obese. This is lower than both the average for its region (24%) and the average for its income group (24%).

- **Adolescent Fertility Rate.** In Guatemala, there are 70 births (2018) per 1,000 women ages 15-19. This is higher than both the average for its region (56) and the average for its income group (45).

- **Social Safety Net Coverage.** In Guatemala, 72 percent (2014) of the poorest quintile is covered by social safety nets. This is higher than both the average for its region (68%) and the average for its income group (57%).

- **Share of Youth Not in Education, Employment or Training (NEET).** In Guatemala, 27 percent (2017) of young people are not in education, employment, or training. This is higher than both the average for its region (21%) and the average for its income group (24%).

- **Drinking Water.** In Guatemala, 94 percent (2017) of the population has at least a basic source of drinking water. This is lower than both the average for its region (95%) and the average for its income group (95%).

- **Internet Connectivity.** In Guatemala, 41 percent (2017) of the population uses the internet. This is lower than both the average for its region (62%) and the average for its income group (60%).
