This brief provides an update to the Human Capital Index (HCI). First launched in 2018, the HCI measures the amount of human capital that a child born today can expect to attain by age 18. It conveys the productivity of the next generation of workers compared to a benchmark of complete education and full health. Worldwide a child born in 2020 can expect, on average, to be 56 percent as productive as she could be when she grows up. All data represent the status of countries pre-COVID-19.

**THE HUMAN CAPITAL INDEX**

**Human Capital Index.** A child born in Iraq today will be 41 percent as productive when she grows up as she could be if she enjoyed complete education and full health. This is lower than the average for Middle East & North Africa region and Upper middle income countries.

- **Probability of Survival to Age 5.** 97 out of 100 children born in Iraq survive to age 5.
- **Expected Years of School.** In Iraq, a child who starts school at age 4 can expect to complete 6.9 years of school by her 18th birthday.
- **Harmonized Test Scores.** Students in Iraq score 363 on a scale where 625 represents advanced attainment and 300 represents minimum attainment.
- **Learning-adjusted Years of School.** Factoring in what children actually learn, expected years of school is only 4 years.
- **Adult Survival Rate.** Across Iraq, 84 percent of 15-year olds will survive until age 60. This statistic is a proxy for the range of health risks that a child born today would experience as an adult under current conditions.
- **Healthy Growth (Not Stunted Rate).** 87 out of 100 children are not stunted. 13 out of 100 children are stunted, and so are at risk of cognitive and physical limitations that can last a lifetime.

**DIFFERENCES IN HCI ACROSS GENDER AND SOCIO-ECONOMIC GROUPS**

In Iraq, the HCI for girls is higher than for boys. Table 1 shows gender disaggregation for each of the HCI components.

In Iraq, there are not sufficient data to disaggregate HCI by socio-economic groups.

Despite recent progress, countries in the Middle East & North Africa could do much more to improve the state of human capital, its utilization, and gender equality. This requires adequate, efficient, and effective public investment to improve health and education outcomes, increase employment of women and youth to better utilize existing human capital, and strengthen social protection systems to help all people reach their full potential.

**DOMESTIC RESOURCE UTILIZATION AND MOBILIZATION**

- **Health Spending.** Iraq spends 1.7 percent (2017) of its GDP in public spending on health. This is lower than both the regional average (3.4%) and the average for its income group (4%). 31 percent (2017) of the population incurs catastrophic health expenditure measured as out-of-pocket spending exceeding 10% of household consumption or income.

- **Education Spending.** In Iraq, data on government education spending are not available. The average for its region is 4.4 percent and for its income group is 4.7 percent.

- **Social Assistance Spending.** Iraq spends 2.6 percent (2013) of its GDP on social assistance. This is higher than both the regional average (1.4%) and the average for its income group (1.5%).

- **Government Revenue.** General government revenue in Iraq is 33 percent (2017) of GDP. This is higher than both the regional average (30.2%) and the average for its income group (30.6%).

**COMPLEMENTARY INDICATORS**

- **Learning Poverty.** In Iraq, data on learning poverty are not available. In its region, 48 percent of 10-year-olds cannot read and understand a simple text by the end of primary school. The corresponding value for its income group is 38 percent.

- **Pre-primary Gross Enrollment.** In Iraq, the gross enrollment ratio in pre-primary education is 11 percent (2018). This is lower than both the average for its region (46%) and the average for its income group (63%).

- **NCD Deaths.** In Iraq, the probability of dying between ages 30 and 70 from cardiovascular disease, cancer, diabetes, or chronic respiratory diseases is 21 percent (2016). This is higher than both the average for its region (17%) and the average for its income group (20%).

- **Hypertension.** In Iraq, 19 percent (2015) of the population age 18 and older has hypertension. This is lower than both the average for its region (20%) and the average for its income group (23%).

- **Diabetes.** In Iraq, 9 percent (2019) of the population ages 20-79 has type 1 or type 2 diabetes. This is lower than both the average for its region (11%) and the average for its income group (10%).

- **Smoking.** In Iraq, data on prevalence of smoking are not available. The average for its region is 21 percent and for its income group is 24 percent.

- **Social Safety Net Coverage.** In Iraq, 86 percent (2012) of the poorest quintile is covered by social safety nets. This is higher than both the average for its region (45%) and the average for its income group (57%).

- **Human Capital Utilization.** In Iraq, 38 percent (2017) of the working-age population is employed. This is lower than both the average for its region (51%) and the average for its income group (57%).

- **Female Labor Force Participation.** In Iraq, the female labor force participation rate is 12 percent (2019). This is lower than both the average for its region (31%) and the average for its income group (47%).

- **Youth Unemployment Rate.** In Iraq, the unemployment rate for youth ages 15-24 is 25 percent (2019). This is higher than both the average for its region (22%) and the average for its income group (22%).

- **Road Traffic Deaths.** In Iraq, for every 100,000 people, 21 people (2016) die due to road traffic injury. This is higher than both the average for its region (17) and the average for its income group (17).

- **Internet Connectivity.** In Iraq, 75 percent (2018) of the population uses the internet. This is higher than both the average for its region (72%) and the average for its income group (60%).

This brief is based on the most recent data available from the Human Capital Project, World Development Indicators, Atlas of Social Protection Indicators of Resilience and Equity (ASPIRE), UNESCO Institute for Statistics, WHO Global Health Observatory and Global Health Expenditure Database, IMF World Economic Outlook, selected national sources and World Bank staff estimates.
