

Sri Lanka

Human Capital Index 2020

This brief provides an update to the Human Capital Index (HCI). First launched in 2018, the HCI measures the amount of human capital that a child born today can expect to attain by age 18. It conveys the productivity of the next generation of workers compared to a benchmark of complete education and full health. Worldwide a child born in 2020 can expect, on average, to be 56 percent as productive as she could be when she grows up. All data represent the status of countries pre-COVID-19.

THE HUMAN CAPITAL INDEX

Human Capital Index. A child born in Sri Lanka today will be **60 percent** as productive when she grows up as she could be if she enjoyed complete education and full health. This is higher than the average for South Asia region and Lower middle income countries.

- **Probability of Survival to Age 5.** 99 out of 100 children born in Sri Lanka survive to age 5.
- **Expected Years of School.** In Sri Lanka, a child who starts school at age 4 can expect to complete **13.2 years** of school by her 18th birthday.
- **Harmonized Test Scores.** Students in Sri Lanka score **400** on a scale where 625 represents advanced attainment and 300 represents minimum attainment.
- **Learning-adjusted Years of School.** Factoring in what children actually learn, expected years of school is only **8.5 years**.
- **Adult Survival Rate.** Across Sri Lanka, **90 percent** of 15-year olds will survive until age 60. This statistic is a proxy for the range of health risks that a child born today would experience as an adult under current conditions.
- **Healthy Growth (Not Stunted Rate).** **83** out of 100 children are **not** stunted. **17** out of 100 children are stunted, and so are at risk of cognitive and physical limitations that can last a lifetime.

DIFFERENCES IN HCI ACROSS GENDER AND SOCIO-ECONOMIC GROUPS

In Sri Lanka, lack of data prevents comparison of HCI by gender. Table 1 shows gender disaggregation for each of the HCI components, where available.

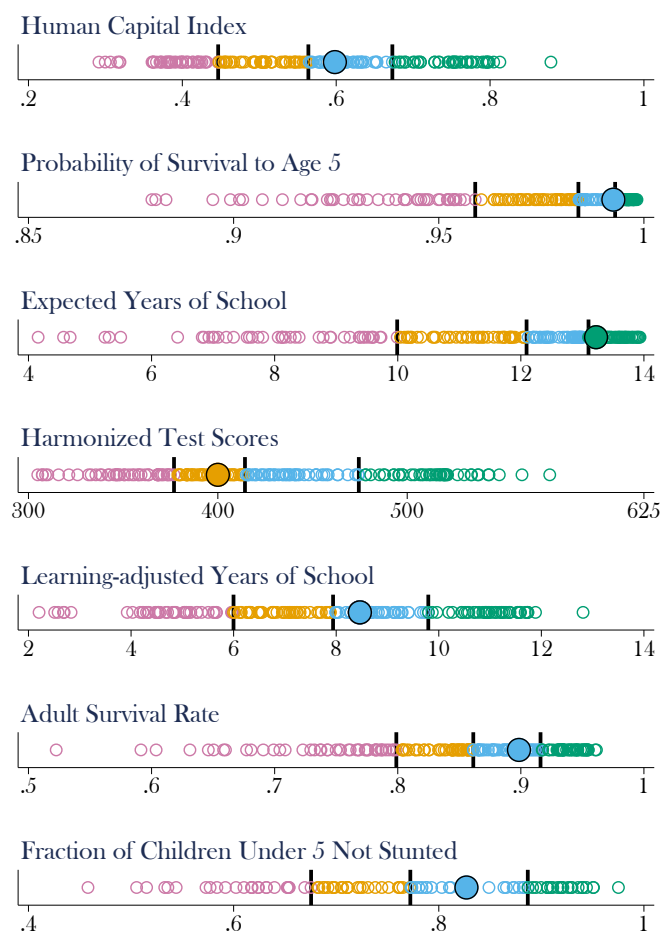

In Sri Lanka, there are not sufficient data to disaggregate HCI by socio-economic groups.

Table 1. HCI by Gender and Socio-economic Group

Component	Boys	Girls	Overall
HCI	-	-	0.60
Survival to Age 5	0.99	0.99	0.99
Expected Years of School	13.2	13.3	13.2
Harmonized Test Scores	-	-	400
Learning-adjusted Years of School	-	-	8.5
Adult Survival Rate	0.85	0.94	0.90
Not Stunted Rate	0.83	0.83	0.83
HCI Ratio (richest / poorest 20 percent)	-	-	-

- Large circle represents Sri Lanka
- Small circles represent other countries
- Lines and color of circles indicate quartiles of the distribution

Despite major progress across many human capital dimensions, South Asia faces large and persistent human capital deficits which limit current and future economic development. Based on the analysis of key challenges facing the Region, Human Capital Acceleration in South Asia requires a 4-pronged framework for action (4i4HCA): **invest** smarter and with quality; **include those being left behind** and empower them, especially adolescent girls and women; **insure** and prepare for potential shocks and risks; and **innovate** through data, technology, and multi-sector action.

DOMESTIC RESOURCE UTILIZATION AND MOBILIZATION

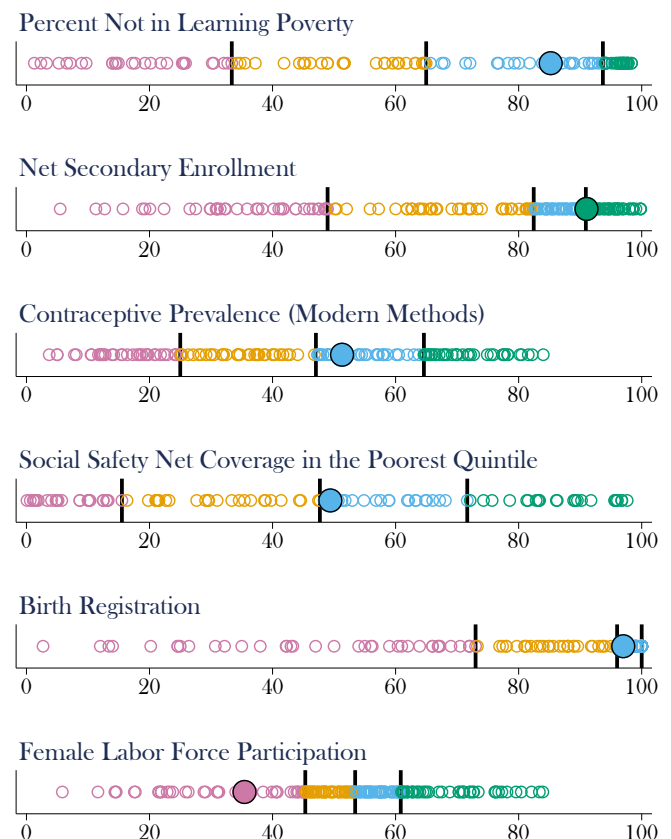

- **Health Spending.** Sri Lanka spends **1.7 percent** (2017) of its GDP in public spending on health. This is lower than both the regional average (2.0%) and the average for its income group (2.8%). **5 percent** (2016) of the population incurs catastrophic health expenditure measured as out-of-pocket spending exceeding 10% of household consumption or income.
- **Education Spending.** Sri Lanka spends **2.1 percent** (2018) of its GDP in government education spending. This is lower than both the regional average (3.8%) and the average for its income group (4.5%).
- **Social Assistance Spending.** Sri Lanka spends **0.7 percent** (2018) of its GDP on social assistance. This is lower than both the regional average (1.1%) and the average for its income group (1.4%).
- **Government Revenue.** General government revenue in Sri Lanka is **13.4 percent** (2018) of GDP. This is lower than both the regional average (21%) and the average for its income group (27.3%).

COMPLEMENTARY INDICATORS

- **Learning Poverty.** In Sri Lanka, **15 percent** (2015) of 10-year-olds cannot read and understand a simple text by the end of primary school. This is lower than both the average for its region (59%) and the average for its income group (59%).
- **Net Secondary Enrollment.** In Sri Lanka, **91 percent** (2018) of secondary-school age children are enrolled in secondary school. This is higher than both the average for its region (63%) and the average for its income group (57%).
- **NCD Deaths.** In Sri Lanka, the probability of dying between ages 30 and 70 from cardiovascular disease, cancer, diabetes, or chronic respiratory diseases is **17 percent** (2016). This is lower than both the average for its region (22%) and the average for its income group (21%).
- **Contraceptive Prevalence.** In Sri Lanka, **51 percent** (2016) of women ages 15-49 use modern contraceptive methods. This is higher than both the average for its region (40%) and the average for its income group (42%).
- **Social Safety Net Coverage.** In Sri Lanka, **48 percent** (2016) of the poorest quintile is covered by social safety nets. This is higher than both the average for its region (44%) and the average for its income group (39%).
- **Birth Registration.** In Sri Lanka, **97 percent** (2007) of children under age 5 had their births registered. This is higher than both the average for its region (62%) and the average for its income group (75%).
- **Human Capital Utilization.** In Sri Lanka, **56 percent** (2017) of the working-age population is employed. This is higher than both the average for its region (51%) and the average for its income group (54%).
- **Female Labor Force Participation.** In Sri Lanka, the female labor force participation rate is **35 percent** (2019). This is higher than the average for its region (33%) but lower than the average for its income group (50%).
- **Drinking Water.** In Sri Lanka, **89 percent** (2017) of the population has at least a basic source of drinking water. This is lower than the average for its region (90%) but higher than the average for its income group (81%).
- **Road Traffic Deaths.** In Sri Lanka, for every 100,000 people, **15 people** (2016) die due to road traffic injury. This is similar to the average for its region (15) but lower than the average for its income group (20).

- **Internet Connectivity.** In Sri Lanka, **34 percent** (2017) of the population uses the internet. This is higher than the average for its region (28%) but similar to the average for its income group (34%).
- **Air Pollution.** In Sri Lanka, **46 percent** (2017) of the population is exposed to ambient concentration of PM2.5 exceeding the WHO guideline value. This is lower than both the average for its region (81%) and the average for its income group (99%).
