This brief provides an update to the Human Capital Index (HCI). First launched in 2018, the HCI measures the amount of human capital that a child born today can expect to attain by age 18. It conveys the productivity of the next generation of workers compared to a benchmark of complete education and full health. Worldwide a child born in 2020 can expect, on average, to be 56 percent as productive as she could be when she grows up. All data represent the status of countries pre-COVID-19.

**THE HUMAN CAPITAL INDEX**

**Human Capital Index.** A child born in Lithuania today will be 71 percent as productive when she grows up as she could be if she enjoyed complete education and full health. This is higher than the average for Europe & Central Asia region but slightly lower than the average for High income countries. Between 2010 and 2020, the HCI value for Lithuania increased from 0.69 to 0.71. Figure 1 shows how the HCI and each of the components evolved over time.

- **Probability of Survival to Age 5.** 100 out of 100 children born in Lithuania survive to age 5.
- **Expected Years of School.** In Lithuania, a child who starts school at age 4 can expect to complete 13.8 years of school by her 18th birthday.
- **Harmonized Test Scores.** Students in Lithuania score 496 on a scale where 625 represents advanced attainment and 300 represents minimum attainment.
- **Learning-adjusted Years of School.** Factoring in what children actually learn, expected years of school is only 11 years.
- **Adult Survival Rate.** Across Lithuania, 84 percent of 15-year olds will survive until age 60. This statistic is a proxy for the range of health risks that a child born today would experience as an adult under current conditions.
- **Healthy Growth (Not Stunted Rate).** Data on stunting are not available for Lithuania.

**DIFFERENCES IN HCI ACROSS GENDER AND SOCIO-ECONOMIC GROUPS**

In Lithuania, the HCI for girls is higher than for boys. Table 1 shows gender disaggregation for each of the HCI components.

In Lithuania, there are not sufficient data to disaggregate HCI by socio-economic groups.

**Note:**
- Large circle represents Lithuania in 2020
- Diamond represents Lithuania in 2010
- Small circles represent other countries
- Lines and color of circles indicate quartiles of the distribution
The outlook for the next generation has been improving in most countries in Europe & Central Asia. Efforts are being made to protect human capital gains against setbacks and accelerate progress for all. The challenges unleashed by COVID-19 require an even stronger policy response, including greater use of technology to improve service delivery and enhanced social assistance programs, to ensure that people receive quality education and health care.

**DOMESTIC RESOURCE UTILIZATION AND MOBILIZATION**

- **Health Spending.** Lithuania spends 4.2 percent (2017) of its GDP in public spending on health. This is lower than both the regional average (4.9%) and the average for its income group (5.3%). 10 percent (2010) of the population incurs catastrophic health expenditure measured as out-of-pocket spending exceeding 10% of household consumption or income.

- **Education Spending.** Lithuania spends 4.0 percent (2016) of its GDP in government education spending. This is lower than both the regional average (4.6%) and the average for its income group (4.5%).

- **Social Assistance Spending.** Lithuania spends 0.4 percent (2016) of its GDP on social assistance. This is lower than both the regional average (1.8%) and the average for its income group (1.7%).

- **Government Revenue.** General government revenue in Lithuania is 33.9 percent (2018) of GDP. This is lower than both the regional average (38.1%) and the average for its income group (37.3%).

**COMPLEMENTARY INDICATORS**

- **Learning Poverty.** In Lithuania, 3 percent (2016) of 10-year-olds cannot read and understand a simple text by the end of primary school. This is lower than both the average for its region (11%) and the average for its income group (14%).

- **Pre-primary Gross Enrollment.** In Lithuania, the gross enrollment ratio in pre-primary education is 88 percent (2017). This is higher than the average for its region (85%) but lower than the average for its income group (91%).

- **Quality-adjusted Years of Higher Education.** In Lithuania, about 57 percent (2017) of adults ages 30-34 have a tertiary degree. A child born today can expect to complete 2 years of higher education. Factoring in the quality of higher education, expected years of higher education is only 1.6 years.

- **NCD Deaths.** In Lithuania, the probability of dying between ages 30 and 70 from cardiovascular disease, cancer, diabetes, or chronic respiratory diseases is 21 percent (2016). This is higher than both the average for its region (17%) and the average for its income group (14%).

- **Health Risk Factors.** In Lithuania 17 percent of adults are obese, 25 percent are smokers, and 20 percent are heavy drinkers.

- **Hypertension.** In Lithuania, 35 percent (2015) of the population age 18 and older has hypertension. This is higher than both the average for its region (29%) and the average for its income group (25%).

- **Diabetes.** In Lithuania, 4 percent (2019) of the population ages 20-79 has type 1 or type 2 diabetes. This is lower than both the average for its region (6%) and the average for its income group (9%).

- **Universal Health Coverage (UHC) Index.** The index, ranging from 0 to 100, measures coverage of essential health services based on tracer interventions. In Lithuania, the UHC Index score is 73 (2017). This is lower than both the average for its region (75) and the average for its income group (79).

- **Social Safety Net Coverage.** In Lithuania, 68 percent (2008) of the poorest quintile is covered by social safety nets. This is higher than the average for its region (46%) but lower than the average for its income group (70%).

- **Human Capital Utilization.** In Lithuania, 72 percent (2018) of the working-age population is employed. This is higher than both the average for its region (65%) and the average for its income group (70%).
