The Former Yugoslav Republic (FYR) of Macedonia

Human Capital Index Rank 88 out of 157

The Human Capital Index (HCI) and Its Components

The HCI measures the amount of human capital that a child born today can expect to attain by age 18. It conveys the productivity of the next generation of workers compared to a benchmark of complete education and full health. It is constructed for 157 countries.

It is made up of five indicators: the probability of survival to age five, a child’s expected years of schooling, harmonized test scores as a measure of quality of learning, adult survival rate (fraction of 15-year olds that will survive to age 60), and the proportion of children who are not stunted.

Globally, 56 percent of all children born today will grow up to be, at best, half as productive as they could be; and 92 percent will grow up to be, at best, 75 percent as productive as they could be.

What is the State of Human Capital in FYR Macedonia?

- **Human Capital Index.** A child born in FYR Macedonia today will be 53 percent as productive when she grows up as she could be if she enjoyed complete education and full health.

- **Probability of Survival to Age 5.** 99 out of 100 children born in FYR Macedonia survive to age 5.

- **Expected Years of School.** In FYR Macedonia, a child who starts school at age 4 can expect to complete 11.2 years of school by her 18th birthday.

- **Harmonized Test Scores.** Students in FYR Macedonia score 382 on a scale where 625 represents advanced attainment and 300 represents minimum attainment.

- **Learning-adjusted Years of School.** Factoring in what children actually learn, expected years of school is only 6.8 years.

- **Adult Survival Rate.** Across FYR Macedonia, 91 percent of 15-year olds will survive until age 60. This statistic is a proxy for the range of fatal and non-fatal health outcomes that a child born today would experience as an adult under current conditions.

- **Healthy Growth (Not Stunted Rate).** 95 out of 100 children are not stunted. 5 out of 100 children are stunted, and so at risk of cognitive and physical limitations that can last a lifetime.

Are There Gender Differences in HCI?

In FYR Macedonia, the HCI for girls is higher than for boys. Table 1 shows gender disaggregation for each of the HCI components.

### Table 1. HCI by Gender

<table>

<td>0.94</td>
<td>0.96</td>
<td>0.95</td>
</tr>
</tbody>
</table>

Note:
- When shown, hyphen denotes data are unavailable
- All values are rounded
- The gender-disaggregated HCI is calculated using only adult survival rates if gender-disaggregated stunting data is not available
HOW DOES FYR MACEDONIA COMPARE?

In 2017, FYR Macedonia’s HCI is lower than the average for its region and income group.

HOW MUCH ARE CHILDREN ACTUALLY LEARNING IN SCHOOL?

Children in FYR Macedonia can expect to complete 11.2 years of pre-primary, primary and secondary school by age 18. However, when years of schooling are adjusted for quality of learning, this is only equivalent to 6.8 years: a learning gap of 4.4 years (Figure 3).

IS FYR MACEDONIA’S HCI IN LINE WITH WHAT IS PREDICTED FOR ITS INCOME LEVEL?

In 2017, the HCI for FYR Macedonia is lower than what would be predicted for its income level (Figure 4).

THE HUMAN CAPITAL PROJECT

The Human Capital Project seeks to raise awareness and increase demand for interventions to build human capital. It aims to accelerate better and more investments in people. The Project has three elements (i) the Human Capital Index, (ii) a program to strengthen research and measurement on human capital; and (iii) support to countries to accelerate progress in raising human capital outcomes.

For more information on the Human Capital Project please visit www.worldbank.org/humancapitalproject
