This brief provides an update to the Human Capital Index (HCI). First launched in 2018, the HCI measures the amount of human capital that a child born today can expect to attain by age 18. It conveys the productivity of the next generation of workers compared to a benchmark of complete education and full health. Worldwide a child born in 2020 can expect, on average, to be 56 percent as productive as she could be when she grows up. All data represent the status of countries pre-COVID-19.

THE HUMAN CAPITAL INDEX

Human Capital Index. A child born in the Netherlands today will be 79 percent as productive when she grows up as she could be if she enjoyed complete education and full health. This is higher than the average for Europe & Central Asia region and High income countries. Between 2010 and 2020, the HCI value for the Netherlands decreased from 0.80 to 0.79. Figure 1 shows how the HCI and each of the components evolved over time.

• Probability of Survival to Age 5. 100 out of 100 children born in the Netherlands survive to age 5.
• Expected Years of School. In the Netherlands, a child who starts school at age 4 can expect to complete 13.9 years of school by her 18th birthday.
• Harmonized Test Scores. Students in the Netherlands score 520 on a scale where 625 represents advanced attainment and 300 represents minimum attainment.
• Learning-adjusted Years of School. Factoring in what children actually learn, expected years of school is only 11.5 years.
• Adult Survival Rate. Across the Netherlands, 95 percent of 15-year olds will survive until age 60. This statistic is a proxy for the range of health risks that a child born today would experience as an adult under current conditions.
• Healthy Growth (Not Stunted Rate). Data on stunting are not available for the Netherlands.

DIFFERENCES IN HCI ACROSS GENDER AND SOCIO-ECONOMIC GROUPS

In the Netherlands, the HCI for girls is higher than for boys. Table 1 shows gender disaggregation for each of the HCI components.

In the Netherlands, there are not sufficient data to disaggregate HCI by socio-economic groups.

HIC Ratio (richest / poorest 20 percent) -

Note:
- Large circle represents Netherlands in 2020
- Diamond represents Netherlands in 2010
- Small circles represent other countries
- Lines and color of circles indicate quartiles of the distribution
The outlook for the next generation has been improving in most countries in Europe & Central Asia. Efforts are being made to protect human capital gains against setbacks and accelerate progress for all. The challenges unleashed by COVID-19 require an even stronger policy response, including greater use of technology to improve service delivery and enhanced social assistance programs, to ensure that people receive quality education and health care.

**DOMESTIC RESOURCE UTILIZATION AND MOBILIZATION**

- **Health Spending.** The Netherlands spends 6.5 percent (2017) of its GDP in public spending on health. This is higher than both the regional average (4.9%) and the average for its income group (5.3%).

- **Education Spending.** The Netherlands spends 5.5 percent (2016) of its GDP in government education spending. This is higher than both the regional average (4.6%) and the average for its income group (4.5%).

- **Social Assistance Spending.** In the Netherlands, data on social assistance spending are not available. The average for its region is 1.8 percent and for its income group is 1.7 percent.

- **Government Revenue.** General government revenue in the Netherlands is 43.5 percent (2018) of GDP. This is higher than both the regional average (38.1%) and the average for its income group (37.3%).

**COMPLEMENTARY INDICATORS**

- **Learning Poverty.** In the Netherlands, 2 percent (2016) of 10-year-olds cannot read and understand a simple text by the end of primary school. This is lower than both the average for its region (11%) and the average for its income group (14%).

- **Pre-primary Gross Enrollment.** In the Netherlands, the gross enrollment ratio in pre-primary education is 94 percent (2017). This is higher than both the average for its region (85%) and the average for its income group (91%).

- **Quality-adjusted Years of Higher Education.** In the Netherlands, about 55 percent (2017) of adults ages 30-34 have a tertiary degree. A child born today can expect to complete 1.9 years of higher education. Factoring in the quality of higher education, expected years of higher education is only 1.7 years.

- **NCD Deaths.** In the Netherlands, the probability of dying between ages 30 and 70 from cardiovascular disease, cancer, diabetes, or chronic respiratory diseases is 11 percent (2016). This is lower than both the average for its region (17%) and the average for its income group (14%).

- **Health Risk Factors.** In the Netherlands, 13 percent (2018) of adults are obese, 25 percent (2017) are smokers, and 32 percent (2016) are heavy drinkers.

- **Hypertension.** In the Netherlands, 25 percent (2015) of the population age 18 and older has hypertension. This is lower than the average for its region (29%) but similar to the average for its income group (25%).

- **Diabetes.** In the Netherlands, 5 percent (2019) of the population ages 20-79 has type 1 or type 2 diabetes. This is lower than both the average for its region (6%) and the average for its income group (9%).

- **Universal Health Coverage (UHC) Index.** The index, ranging from 0 to 100, measures coverage of essential health services based on tracer interventions. In the Netherlands, the UHC Index score is 86 (2017). This is higher than both the average for its region (75) and the average for its income group (79).

- **Social Safety Net Coverage.** In the Netherlands, data on social safety net coverage of the poorest quintile are not available. The average for its region is 46 percent and for its income group is 70 percent.

- **Human Capital Utilization.** In the Netherlands, 77 percent (2018) of the working-age population is employed. This is higher than both the average for its region (65%) and the average for its income group (70%).

### Figure 2. Complementary Indicators

#### Percent Not in Learning Poverty

- Large circle represents Netherlands
- Small circles represent other countries
- Lines and color of circles indicate quartiles of the distribution

#### Quality-adjusted Years of Higher Education

#### Percent of Adults Who Are Not Hypertensive

#### Percent of Adults Who Are Not Diabetic

#### Social Safety Net Coverage in the Poorest Quintile

#### Human Capital Utilization

Note:
- Large circle represents Netherlands
- Small circles represent other countries
- Lines and color of circles indicate quartiles of the distribution

This brief is based on the most recent data available from the Human Capital Project, World Development Indicators, Atlas of Social Protection Indicators of Resilience and Equity (ASPIRE), UNESCO Institute for Statistics, WHO Global Health Observatory and Global Health Expenditure Database, IMF World Economic Outlook, selected national sources and World Bank staff estimates.
