

# New Zealand

Human Capital Index Rank 21 out of 157

## THE HUMAN CAPITAL INDEX (HCI) AND ITS COMPONENTS

The HCI measures the amount of human capital that a child born today can expect to attain by age 18. It conveys the productivity of the next generation of workers compared to a benchmark of complete education and full health. It is constructed for 157 countries.

It is made up of five indicators: the probability of survival to age five, a child's expected years of schooling, harmonized test scores as a measure of quality of learning, adult survival rate (fraction of 15-year olds that will survive to age 60), and the proportion of children who are not stunted.

Globally, 56 percent of all children born today will grow up to be, at best, half as productive as they could be; and 92 percent will grow up to be, at best, 75 percent as productive as they could be.

## WHAT IS THE STATE OF HUMAN CAPITAL IN NEW ZEALAND?

- **Human Capital Index.** A child born in New Zealand today will be **77 percent** as productive when she grows up as she could be if she enjoyed complete education and full health.
- **Probability of Survival to Age 5.** **99** out of 100 children born in New Zealand survive to age 5.
- **Expected Years of School.** In New Zealand, a child who starts school at age 4 can expect to complete **13.6 years** of school by her 18th birthday.
- **Harmonized Test Scores.** Students in New Zealand score **517** on a scale where **625** represents advanced attainment and **300** represents minimum attainment.
- **Learning-adjusted Years of School.** Factoring in what children actually learn, expected years of school is only **11.2 years**.
- **Adult Survival Rate.** Across New Zealand, **94 percent** of 15-year olds will survive until age 60. This statistic is a proxy for the range of fatal and non-fatal health outcomes that a child born today would experience as an adult under current conditions.
- **Healthy Growth (Not Stunted Rate).** Data on stunting are not available for New Zealand.

## ARE THERE GENDER DIFFERENCES IN HCI?

In New Zealand, the HCI for girls is higher than for boys. Table 1 shows gender disaggregation for each of the HCI components.

Figure 1. HCI and Components

Note:

- Large circle represents New Zealand
- Small circles represent other countries
- Thick, vertical lines and color of circles reflect quartiles of the distribution

Table 1. HCI by Gender

Component	Boys	Girls	Overall
HCI	0.75	0.78	0.77
Survival to Age 5	0.99	1	0.99
Expected Years of School	13.5	13.7	13.6
Harmonized Test Scores	513	522	517
Learning-adjusted Years of School	11.1	11.4	11.2
Adult Survival Rate	0.93	0.95	0.94
Not Stunted Rate	-	-	-

Note:

- When shown, hyphen denotes data are unavailable
- All values are rounded
- The gender-disaggregated HCI is calculated using only adult survival rates if gender-disaggregated stunting data is not available

Figure 2. Benchmarking HCI

Notes:  
 - Unless specified all data are for 2017  
 - The uncertainty intervals (black vertical lines) reflect uncertainty in the measurement of components of the Index

### HOW DOES NEW ZEALAND COMPARE?

In 2017, New Zealand’s HCI is higher than the average for its region and income group.

Figure 3. Learning Gap

### HOW MUCH ARE CHILDREN ACTUALLY LEARNING IN SCHOOL?

Children in New Zealand can expect to complete **13.6 years** of pre-primary, primary and secondary school by age 18. However, when years of schooling are adjusted for quality of learning, this is only equivalent to **11.2 years**: a learning gap of **2.4 years** (Figure 3).

Figure 4. Human Capital Index vs GDP Per Capita

### IS NEW ZEALAND’S HCI IN LINE WITH WHAT IS PREDICTED FOR ITS INCOME LEVEL?

In 2017, the HCI for New Zealand is higher than what would be predicted for its income level (Figure 4).

### THE HUMAN CAPITAL PROJECT

The Human Capital Project seeks to raise awareness and increase demand for interventions to build human capital. It aims to accelerate better and more investments in people. The Project has three elements (i) the Human Capital Index, (ii) a program to strengthen research and measurement on human capital; and (iii) support to countries to accelerate progress in raising human capital outcomes.

For more information on the Human Capital Project please visit [www.worldbank.org/humancapitalproject](http://www.worldbank.org/humancapitalproject)
