Human Capital Index 2020

This brief provides an update to the Human Capital Index (HCI). First launched in 2018, the HCI measures the amount of human capital that a child born today can expect to attain by age 18. It conveys the productivity of the next generation of workers compared to a benchmark of complete education and full health. Worldwide a child born in 2020 can expect, on average, to be 56 percent as productive as she could be when she grows up. All data represent the status of countries pre-COVID-19.

THE HUMAN CAPITAL INDEX

Human Capital Index. A child born in Thailand today will be **61 percent** as productive when she grows up as she could be if she enjoyed complete education and full health. This is higher than the average for East Asia & Pacific region and Upper middle income countries. Between 2010 and 2020, the HCI value for Thailand increased from 0.58 to 0.61. Figure 1 shows how the HCI and each of the components evolved over time.

- **Probability of Survival to Age 5.** 99 out of 100 children born in Thailand survive to age 5.
- **Expected Years of School.** In Thailand, a child who starts school at age 4 can expect to complete **12.7 years** of school by her 18th birthday.
- **Harmonized Test Scores.** Students in Thailand score **427** on a scale where 625 represents advanced attainment and 300 represents minimum attainment.
- **Learning-adjusted Years of School.** Factoring in what children actually learn, expected years of school is only **8.7 years**.
- **Adult Survival Rate.** Across Thailand, **87 percent** of 15-year olds will survive until age 60. This statistic is a proxy for the range of health risks that a child born today would experience as an adult under current conditions.
- **Healthy Growth (Not Stunted Rate).** **89** out of 100 children are **not** stunted. **11** out of 100 children are stunted, and so are at risk of cognitive and physical limitations that can last a lifetime.

DIFFERENCES IN HCI ACROSS GENDER AND SOCIO-ECONOMIC GROUPS

In Thailand, the HCI for girls is higher than for boys. Table 1 shows gender disaggregation for each of the HCI components.

In Thailand, there are not sufficient data to disaggregate HCI by socio-economic groups.

Table 1. HCI by Gender and Socio-economic Group

Component	Boys	Girls	Overall
HCI	0.59	0.63	0.61
Survival to Age 5	0.99	0.99	0.99
Expected Years of School	12.8	12.7	12.7
Harmonized Test Scores	413	439	427
Learning-adjusted Years of School	8.4	8.9	8.7
Adult Survival Rate	0.82	0.92	0.87
Not Stunted Rate	0.88	0.91	0.89
HCI Ratio (richest / poorest 20 percent)			-

Figure 1. HCI and Components

Note:

- Large circle represents Thailand in 2020
- Diamond represents Thailand in 2010
- Small circles represent other countries
- Lines and color of circles indicate quartiles of the distribution

Countries in the East Asia and Pacific (EAP) region have made remarkable progress on almost every dimension of human capital in the last decade (2010-2020). COVID-19, however, threatens to wipe out much of the progress. Action is needed to boost learning achievement; reinvigorate the health, nutrition, and education systems; and deploy social safety nets to protect the most vulnerable, thus enabling an inclusive and sustainable recovery and accelerating human capital accumulation.

DOMESTIC RESOURCE UTILIZATION AND MOBILIZATION

- **Health Spending.** Thailand spends **2.9 percent** (2017) of its GDP in public spending on health. This is lower than both the regional average (4.9%) and the average for its income group (4%). **2 percent** (2017) of the population incurs catastrophic health expenditure measured as out-of-pocket spending exceeding 10% of household consumption or income.
- **Education Spending.** Thailand spends **4.1 percent** (2013) of its GDP in government education spending. This is lower than both the regional average (4.7%) and the average for its income group (4.7%).
- **Social Assistance Spending.** Thailand spends **0.5 percent** (2011) of its GDP on social assistance. This is lower than both the regional average (1.1%) and the average for its income group (1.5%).
- **Government Revenue.** General government revenue in Thailand is **21.4 percent** (2018) of GDP. This is lower than both the regional average (40.7%) and the average for its income group (30.6%).

COMPLEMENTARY INDICATORS

- **Learning Poverty.** In Thailand, **23 percent** (2011) of 10-year-olds cannot read and understand a simple text by the end of primary school. This is higher than the average for its region (15%) but lower than the average for its income group (38%).
- **Net Secondary Enrollment.** In Thailand, **77 percent** (2015) of secondary-school age children are enrolled in secondary school. This is higher than the average for its region (72%) but lower than the average for its income group (78%).
- **NCD Deaths.** In Thailand, the probability of dying between ages 30 and 70 from cardiovascular disease, cancer, diabetes, or chronic respiratory diseases is **15 percent** (2016). This is lower than both the average for its region (21%) and the average for its income group (20%).
- **Diabetes.** In Thailand, **7 percent** (2019) of the population ages 20-79 has type 1 or type 2 diabetes. This is lower than both the average for its region (12%) and the average for its income group (10%).
- **Smoking.** In Thailand, **20 percent** (2016) of the population age 15 and older are current smokers (**39 percent** among men). This is lower than both the average for its region (25%) and the average for its income group (24%).
- **Universal Health Coverage (UHC) Index.** The index, ranging from 0 to 100, measures coverage of essential health services based on tracer interventions. In Thailand, the UHC Index score is **80** (2017). This is higher than both the average for its region (65) and the average for its income group (69).
- **Social Safety Net Coverage.** In Thailand, **82 percent** (2013) of the poorest quintile is covered by social safety nets. This is higher than both the average for its region (45%) and the average for its income group (57%).
- **Social Safety Net Adequacy.** In Thailand, social assistance transfers represent **13 percent** (2013) of total welfare of households in the poorest quintile. This is higher than the average for its region (9%) but lower than the average for its income group (23%).
- **Human Capital Utilization.** In Thailand, **74 percent** (2018) of the working-age population is employed. This is higher than both the average for its region (65%) and the average for its income group (57%).

- **Female Labor Force Participation.** In Thailand, the female labor force participation rate is **59 percent** (2019). This is higher than both the average for its region (57%) and the average for its income group (47%).
- **Drinking Water.** In Thailand, **100 percent** (2017) of the population has at least a basic source of drinking water. This is higher than both the average for its region (92%) and the average for its income group (95%).
