Tuvalu

Human Capital Index Rank 83 out of 157

THE HUMAN CAPITAL INDEX (HCI) AND ITS COMPONENTS

The HCI measures the amount of human capital that a child born today can expect to attain by age 18. It conveys the productivity of the next generation of workers compared to a benchmark of complete education and full health. It is constructed for 157 countries.

It is made up of five indicators: the probability of survival to age five, a child’s expected years of schooling, harmonized test scores as a measure of quality of learning, adult survival rate (fraction of 15-year olds that will survive to age 60), and the proportion of children who are not stunted.

Globally, 56 percent of all children born today will grow up to be, at best, half as productive as they could be; and 92 percent will grow up to be, at best, 75 percent as productive as they could be.

WHAT IS THE STATE OF HUMAN CAPITAL IN TUVALU?

- **Human Capital Index.** A child born in Tuvalu today will be 55 percent as productive when she grows up as she could be if she enjoyed complete education and full health.
- **Probability of Survival to Age 5.** 98 out of 100 children born in Tuvalu survive to age 5.
- **Expected Years of School.** In Tuvalu, a child who starts school at age 4 can expect to complete 11.9 years of school by her 18th birthday.
- **Harmonized Test Scores.** Students in Tuvalu score 387 on a scale where 625 represents advanced attainment and 300 represents minimum attainment.
- **Learning-adjusted Years of School.** Factoring in what children actually learn, expected years of school is only 7.4 years.
- **Adult Survival Rate.** Data on adult survival rate are not available for Tuvalu.
- **Healthy Growth (Not Stunted Rate).** 90 out of 100 children are not stunted. 10 out of 100 children are stunted, and so at risk of cognitive and physical limitations that can last a lifetime.

ARE THERE GENDER DIFFERENCES IN HCI?

In Tuvalu, lack of data prevents comparison of HCI by gender. Table 1 shows gender disaggregation for each of the HCI components, where available.

- Small circles represent other countries
- Thick, vertical lines and color of circles reflect quartiles of the distribution

Figure 1. HCI and Components
HOW DOES TUVALU COMPARE?

In 2017, Tuvalu’s HCI is lower than the average for its region and income group.

HOW MUCH ARE CHILDREN ACTUALLY LEARNING IN SCHOOL?

Children in Tuvalu can expect to complete 11.9 years of pre-primary, primary and secondary school by age 18. However, when years of schooling are adjusted for quality of learning, this is only equivalent to 7.4 years: a learning gap of 4.5 years (Figure 3).

IS TUVALU’S HCI IN LINE WITH WHAT IS PREDICTED FOR ITS INCOME LEVEL?

In 2017, the HCI for Tuvalu is higher than what would be predicted for its income level (Figure 4).

THE HUMAN CAPITAL PROJECT

The Human Capital Project seeks to raise awareness and increase demand for interventions to build human capital. It aims to accelerate better and more investments in people. The Project has three elements (i) the Human Capital Index, (ii) a program to strengthen research and measurement on human capital; and (iii) support to countries to accelerate progress in raising human capital outcomes.
