Republic of Yemen

Human Capital Index 2020

This brief provides an update to the Human Capital Index (HCI). First launched in 2018, the HCI measures the amount of human capital that a child born today can expect to attain by age 18. It conveys the productivity of the next generation of workers compared to a benchmark of complete education and full health. Worldwide a child born in 2020 can expect, on average, to be 56 percent as productive as she could be when she grows up. All data represent the status of countries pre-COVID-19.

THE HUMAN CAPITAL INDEX

Human Capital Index. A child born today in the Republic of Yemen will be 37 percent as productive when she grows up as she could be if she enjoyed complete education and full health. This is lower than the average for the Middle East & North Africa region but slightly lower than the average for Low income countries.

- Probability of Survival to Age 5. 95 out of 100 children born in the Republic of Yemen survive to age 5.
- Expected Years of School. In the Republic of Yemen, a child who starts school at age 4 can expect to complete 8.1 years of school by her 18th birthday.
- Harmonized Test Scores. Students in the Republic of Yemen score 321 on a scale where 625 represents advanced attainment and 300 represents minimum attainment.
- Learning-adjusted Years of School. Factoring in what children actually learn, expected years of school is only 4.2 years.
- Adult Survival Rate. Across the Republic of Yemen, 80 percent of 15-year olds will survive until age 60. This statistic is a proxy for the range of health risks that a child born today would experience as an adult under current conditions.
- Healthy Growth (Not Stunted Rate). 54 out of 100 children are not stunted. 46 out of 100 children are stunted, and so are at risk of cognitive and physical limitations that can last a lifetime.

DIFFERENCES IN HCI ACROSS GENDER AND SOCIO-ECONOMIC GROUPS

In the Republic of Yemen, the HCI for girls is lower than for boys. Table 1 shows gender disaggregation for each of the HCI components.

In the Republic of Yemen, there are not sufficient data to disaggregate HCI by socio-economic groups.

Despite recent progress, countries in the Middle East & North Africa could do much more to improve the state of human capital, its utilization, and gender equality. This requires adequate, efficient, and effective public investment to improve health and education outcomes, increase employment of women and youth to better utilize existing human capital, and strengthen social protection systems to help all people reach their full potential.

**DOMESTIC RESOURCE UTILIZATION AND MOBILIZATION**

- **Health Spending.** In the Republic of Yemen, data on public spending on health are not available. The average for its region is 3.4 percent and for its income group is 2.1 percent.

- **Education Spending.** The Republic of Yemen spends 5.2 percent (2008) of its GDP in government education spending. This is higher than both the regional average (4.4%) and the average for its income group (3.6%).

- **Social Assistance Spending.** In the Republic of Yemen, data on social assistance spending are not available. The average for its region is 1.4 percent and for its income group is 1.3 percent.

- **Government Revenue.** General government revenue in the Republic of Yemen is 3.8 percent (2017) of GDP. This is lower than both the regional average (30.2%) and the average for its income group (19.1%).

**COMPLEMENTARY INDICATORS**

- **Learning Poverty.** In the Republic of Yemen, 95 percent (2011) of 10-year-olds cannot read and understand a simple text by the end of primary school. This is higher than both the average for its region (48%) and the average for its income group (91%).

- **Pre-primary Gross Enrollment.** In the Republic of Yemen, the gross enrollment ratio in pre-primary education is 2 percent (2016). This is lower than both the average for its region (46%) and the average for its income group (23%).

- **NCD Deaths.** In the Republic of Yemen, the probability of dying between ages 30 and 70 from cardiovascular disease, cancer, diabetes, or chronic respiratory diseases is 31 percent (2016). This is higher than both the average for its region (17%) and the average for its income group (23%).

- **Hypertension.** In the Republic of Yemen, 23 percent (2015) of the population age 18 and older has hypertension. This is higher than the average for its region (20%) but similar to the average for its income group (23%).

- **Diabetes.** In the Republic of Yemen, 5 percent (2019) of the population ages 20-79 has type 1 or type 2 diabetes. This is lower than both the average for its region (11%) and the average for its income group (6%).

- **Smoking.** In the Republic of Yemen, 18 percent (2016) of the population age 15 and older are current smokers. This is lower than the average for its region (21%) but higher than the average for its income group (13%).

- **Social Safety Net Coverage.** In the Republic of Yemen, 16 percent (2005) of the poorest quintile is covered by social safety nets. This is lower than both the average for its region (45%) and the average for its income group (17%).

- **Human Capital Utilization.** In the Republic of Yemen, 32 percent (2014) of the working-age population is employed. This is lower than both the average for its region (51%) and the average for its income group (57%).

- **Female Labor Force Participation.** In the Republic of Yemen, the female labor force participation rate is 6 percent (2019). This is lower than both the average for its region (31%) and the average for its income group (58%).

- **Youth Unemployment Rate.** In the Republic of Yemen, the unemployment rate for youth ages 15-24 is 24 percent (2019). This is higher than both the average for its region (22%) and the average for its income group (10%).

- **Road Traffic Deaths.** In the Republic of Yemen, for every 100,000 people, 22 people (2013) die due to road traffic injury. This is higher than the average for its region (17) but lower than the average for its income group (27).

- **Internet Connectivity.** In the Republic of Yemen, 27 percent (2017) of the population uses the internet. This is lower than the average for its region (72%) but higher than the average for its income group (14%).

**Figure 2. Complementary Indicators**

**Percent Not in Learning Poverty**

**Percent of Adults Who Are Not Hypertensive**

**Percent of Adults Who Are Not Diabetic**

**Percent of Adults Not Currently Smoking**

**Social Safety Net Coverage in the Poorest Quintile**

**Youth Employment Rate**

Note:
- Large circle represents Yemen, Rep.
- Small circles represent other countries
- Lines and color of circles indicate quartiles of the distribution

This brief is based on the most recent data available from the Human Capital Project, World Development Indicators, Atlas of Social Protection Indicators of Resilience and Equity (ASPIRE), UNESCO Institute for Statistics, WHO Global Health Observatory and Global Health Expenditure Database, IMF World Economic Outlook, selected national sources and World Bank staff estimates.
